<sup>1</sup> Number reporting beginning 1920.

<sup>2</sup> Total premium receipts prior to 1910.

<sup>3</sup> Figures for 1895 to 1930 include adjustment expenses excluded thereafter.

<sup>4</sup> Including taxes.

<sup>5</sup> Figures through 1930 include data for companies which transact life insurance in addition to accident and health insurance. Income and disbursement items include business of accident and health branches only of these life insurance companies, where companies were able to segregate data, while capital, assets, and net surplus include total amounts of these items for such companies, excluding, however, data for a few very large companies for which accident and health business is only a small proportion of the total business. Capital, assets, and net surplus are therefore overstated and in part duplicated in figures for life insurance companies in other tables. Figures for 1935 to 1945 relate to casualty, surety and miscellaneous insurance companies only.

<sup>6</sup> Includes stock casualty, surety, and miscellaneous insurance companies, shown separately above, mutual companies, reciprocal, and Lloyds; number of companies and income and disbursement items also include accident and health departments of life insurance companies. No comparable data after 1943.

## No. 492.—PROFITS AND DIVIDENDS OF INDUSTRIAL CORPORATIONS: 1939 TO 1946

[Includes data for 629 large corporations none with assets of less than \$250,000. Representation very limited for companies with assets between \$250,000 and \$5,000,000. Excludes data for some important nondurable goods industries, such as meat packing, sugar refining, and rubber. Net profits are before dividends and after all charges, such as depreciation, interest, special reserves charged as expenses, and all taxes. Few companies report aggregate dollar dividends quarterly; for most companies represented, dividends are computed for each class of stock on basis of dividends per share and number of shares outstanding. Data not available before 1939. For net profits of all corporations as compiled from income-tax, see tables 361 and 362, pages 345 and 346.]

# No. 498.—INDUSTRIAL AND COMMERCIAL FAILURES—NUMBER AND LIABILITIES: 1857 TO 1946

[Series revised beginning 1933 to exclude real estate and financial companies. These revisions bring failure record more nearly in accordance with type of concerns covered by "Total number of concerns in business," in which no changes were made. Beginning 1933, new series includes voluntary discontinuances with loss to creditors and small concerns forced out of business with insufficient assets to cover all claims, in addition to failures included in former series]

### No. 499.—INDUSTRIAL AND COMMERCIAL FAILURES—NUMBER AND LIABILITIES, BY MONTHS: 1941 TO 1946

[Liabilities in thousands of dollars. Current liabilities include all accounts and notes payable and all obligations, whether in secured form or not, known to be held by banks, officers, affiliated companies, supplying companies, or the Government. Deferred liabilities (the difference between current, as defined above, and the total) are therefore long-term obligations held by the public]

## 17. Communication Systems

(Including postal service)

Financial and operating data for telephone, wire-telegraph, ocean-cable, and radio-telegraph carriers which render domestic and foreign service, are shown in this section. Also included are data relating to radio broadcast stations and networks which operate in the continental United States and its possessions.

Additional statistics on the communication industry as well as statistics on the number of telephones on farms, radios in occupied dwelling units, and the manufacture of communication equipment appear in other sections of this Abstract.

The Bureau of the Census in the Census of Electrical Industries compiled at 5-year intervals beginning in 1902 a report on telephones and telegraphs, covering all systems and lines. The last survey made was for the year 1937. Since the establishment of the Federal Communications Commission in 1934, statistical coverage of communications has been centralized and expanded in that agency.

Reports filed with the Federal Communications Commission cover substantially all of the radio broadcast stations and networks, wire-telegraph, ocean-cable, and radio-telegraph carriers operating in the United States and its possessions. Gross operating revenues of the telephone carriers reporting to the Commission are estimated to include approximately 95 percent of the operating revenues of all telephone carriers in the United States and its possessions. Statistical data compiled from these reports are contained in a volume entitled *Statistics of the Communications Industry in the United States*, which is published annually by the Federal Communications Commission.

"Bell System," as referred to in this section, consists of the American Telephone & Telegraph Co. and its principal telephone subsidiaries, which comprise all operating telephone carriers having assets in excess of \$1,000,000 and in which the American Telephone & Telegraph Co. owns, directly or indirectly, more than 50 percent of the outstanding voting capital stock.

Data on the postal service, obtained principally from the annual reports of the Postmaster General, are also included in the section.

<sup>1</sup> Includes 10,560 connecting lines for which separate reports were not secured; data for such lines, however, were included in reports of operating companies supplying switchboard service.

<sup>2</sup> Includes data for connecting lines having fewer than 5 telephones per line, as follows: 11,759 lines; 29,000 telephones; and estimated figures for other items as follows: 44,000 miles of single wire; and \$1,600,000 investment in equipment.

<sup>3</sup> Not reported for systems and lines having less than \$5,000 annual income in 1912. For 1917 and 1922, figures represent number of systems and lines reporting central offices; actual number of central offices was probably slightly larger.

<sup>4</sup> Not reported except for systems and lines with income of \$5,000 or more.

<sup>5</sup> Including assessments of mutual companies, and miscellaneous operating revenues.

<sup>6</sup> 83,373,000 miles of wire in cable and 6,193,000 not in cable.

<sup>7</sup> No data.

<sup>8</sup> No comparable data available.

## No. 508.—TELEPHONE SYSTEMS—SUMMARY, CLASS A CARRIERS: 1926 TO 1945

[Covers class A telephone carriers filing annual reports with F. C. C. Class A carriers are those whose average annual operating revenues exceeded \$100,000. Gross operating revenues of class A carriers (excluding intercompany duplications of Bell System) reporting in 1937 represented approximately 94 percent of revenues of all telephone carriers as reported for Census of Electrical Industries for that year. (See table 503.) Figures include data for carriers consolidated and merged for which annual data are available. Includes intercompany duplications, but data for 1943-45 excluding such duplications are shown in italics below]

<sup>1</sup> Ratio of operating expenses to operating revenues.

<sup>2</sup> The decrease reflected in data shown for 1933 is due mainly to the fact that prior to that year the total of wire jointly owned with other companies was included, whereas from 1933 on, only the respondents' portion of jointly owned wire was included.

<sup>3</sup> Data for 1926 through 1932 include estimates.

<sup>4</sup> In comparing figures in this table, consideration should be given to the minor effect of revisions of Uniform System of Accounts, effective Jan. 1, 1933, and Jan. 1, 1937, resulting in certain changes in and rearrangements of both balance sheet and income statement.

<sup>5</sup> Excluding intercompany duplications.

<sup>6</sup> As of end of October.

<sup>1</sup> Ratio of operating expenses to operating revenues.

<sup>2</sup> Represents estimates by reporting carriers. Excludes stock and commercial news traffic and telephone toll messages. Mobile and foreign messages, domestic haul, excluded to avoid duplication.

<sup>3</sup> Data for 1926-33 include estimates by reporting carriers.

<sup>4</sup> Deficit or other reverse item.

<sup>5</sup> Includes net book cost of plant of Postal Telegraph, Inc., acquired by The Western Union Telegraph Co. in amount of \$16,764,000 on basis of gross book cost of \$69,230,000 less tentative allowance for depreciation of \$52,866,000.

<sup>6</sup> Represents operating income before deduction of income taxes.

<sup>7</sup> Not comparable with amount reported for Dec. 31, 1943, because of accounting adjustment for Postal Telegraph plant purchased by the Western Union Telegraph Co. Oct. 7, 1943; comparable 1943 amount is \$477,431,000.

<sup>8</sup> Includes \$3,526,000 charged to capital surplus.

<sup>1</sup> Excluding rural free delivery routes, ocean mail routes, and air-mail routes to foreign countries.

<sup>2</sup> Audited postal surplus or deficit which is greater or less than excess of receipts or expenditures by the amount of adjusted losses and contingencies.

<sup>3</sup> International includes foreign countries on domestic basis. For explanation, see headnote, table 517.

<sup>4</sup> Data are for continental United States and are estimates except in 1923 and beginning with 1926, when figures are accurate calculations. No estimates made from 1914 to 1922, inclusive.

<sup>5</sup> Postage stamps first issued under act of Mar. 3, 1847, and placed on sale at New York July 1, 1847.

<sup>6</sup> From Nov. 1, 1864, when money-order system first went into operation, to June 30, 1865.

<sup>7</sup> From Sept. 1, 1869, to June 30, 1870. International money orders first issued under convention of Oct. 12, 1867.

<sup>8</sup> Gross revenues of department for 1918 and 1919 include \$44,800,000 and \$71,202,000, respectively, war-tax revenue accruing from increased postage.

No. 517.—POSTAL MONEY-ORDER BUSINESS—SUMMARY: YEARS ENDED JUNE 30, 1920 TO 1945

[For revenues from money orders, see table 516. For value of orders issued for other years, see table 515. Money orders are exchanged on a domestic basis not only within this country, but with its outlying possessions, Canada, Cuba, and numerous islands and minor countries neighboring the United States. International-basis orders are exchanged between United States and its outlying possessions, on one hand, and other than "domestic basis" foreign countries, on the other. In this table, however, "International" includes money orders exchanged between United States and "domestic basis" foreign countries, and these are not included in "Domestic"]

**No. 519.—TRANSPORTATION OF DOMESTIC MAILS, BY CLASS OF SERVICE: 1925 TO 1945**

[Since Nov. 1, 1916, all service on steam railroads is authorized and paid for under space basis system, formerly, payments were based on a system of quadrennial weighings. Railway mail space units of service vary in size and character and may consist of a car, a section of a car, or a closed pouch carried on a car. Some cars are railway post offices, others are for storage only, about 20 classes of units being distinguished. The "equated unit" represents a calculation of the equivalent of all the different units in terms of a 60-foot car. Annual rate of expenditure (regular authorizations) represents estimated cost for transporting normal mail traffic over regular routes only, based on contracts outstanding at end of each fiscal year. "Annual cost" includes emergency and side and transfer service. Average rates based on "regular authorizations"]

## 18. Power

Energy for supplying mechanical power, heat, light and refrigeration for the complex machinery and processes necessary to maintain productivity and comfort in the United States is derived primarily from coal, oil, water, natural gas, wood and waste, wind, certain basic chemical and physical reactions, and the rays of the sun. Of these between 15 and 20 percent of the coal, over 2 percent of the oil, practically all of the water, and 10 percent of the natural gas are converted to electricity for application to the energy requirements of our economic system.

Statistics on these various sources of energy are compiled by numerous agencies but only a few of the series are reasonably complete or arranged to avoid duplication in a manner that permits ready computation of total energy requirements. Oil, coal, natural gas, and wood yield many products as well as power and, consequently, enter into many statistical series.

Data on coal, oil, and natural gas production, utilization, and related subjects are compiled annually by the Bureau of Mines and are published in the Minerals Yearbook. Data on natural gas utilization and the production of manufactured gas from coal, oil, and related products, its utilization, and related statistics are published by the American Gas Association in its monthly bulletins and annual statistical numbers. Summaries of statistical material from these sources appear in this Abstract in section 27, Mining and Mineral Products.

Data on the production of electric energy by type of prime mover and showing the quantities of basic fuels—coal, oil, natural gas, and others—used in production, and the capacity of all generating plants by type of prime mover and related statistics are compiled and published annually by the Federal Power Commission. These data cover both generation for public use by electric utilities and for use by the producer where generated by non-utility establishments. Data on sales, revenues, and customers by classes of service, on rates and typical bills, and related matters are also published by the Commission. Monthly statistics on production, fuels used in production, sales by classes of service, salaries and wages, taxes, and other costs are also published and distributed by the Federal Power Commission in a loose-leaf current data series known as Electric Power Statistics. Statistics on the distribution of electric energy by utilities for public use are presented monthly and annually by the Edison Electric Institute in its Statistical Bulletins. Summaries of these statistics appear in the following tables.

Data on the use of power by manufacturing, extracting, and related industries are issued from time to time by the Bureau of the Census in its Censuses of Manufactures and Mineral Industries. For the period 1929 to 1946, data on the use of electric power by major industry groups were compiled and published by the Federal Power Commission in a report on Industrial Electric Energy. Statistics based on these studies appear in the sections on manufacturing and mineral industries in this Abstract.

Over-all statistics on water as an actual and potential source of power are compiled by the Federal Power Commission and are shown in table 534.

The Bureau of the Census in the Census of Electrical Industries compiled at five-year intervals beginning in 1902 a report on the Electric Light and Power Industry. The last survey made was for the year 1937. Summary statistics from this report are shown in table 530.

Data in this section relate to continental United States except as indicated.

### No. 523.—ENERGY FROM MINERAL FUELS AND WATER POWER—ANNUAL SUPPLY: 1889 TO 1945

[In trillions of British thermal units. Unit heat values employed are: Anthracite, 13,600 B. t. u. per pound; bituminous coal and lignite, 13,100 B. t. u. per pound; petroleum, 5,000,000 B. t. u. per barrel; natural gas, 1,075 B. t. u. per cubic foot. Water power includes installations owned by manufacturing plants and mines, as well as Government- and privately-owned public utilities. Fuel equivalent of water power calculated from kilowatt-hours of power produced wherever available, as is true of all public-utility plants since 1919. Otherwise, fuel equivalent calculated from reported horsepower of installed water wheels, assuming capacity factor of 20 percent of manufacturers and mines and of 40 percent for public utilities.]

**O. 525.—PRODUCTION OF ELECTRIC ENERGY AND CAPACITY OF GENERATING PLANTS  
BY TYPE OF PRIME MOVER: 1920 TO 1946**

[Figures for 1945 in tables 524-526 for Electric Utilities (for public use) are based on operation of 3,886 power plants owned by 1,894 concerns. Production and capacity of plants owned by following classes of electric utility operators are included—privately owned electric utilities, municipal electric utilities, Federal power projects, cooperatives, power districts, State projects, and publicly owned noncentral stations. Electric utility data for 1920-44 have been revised to 1945 basis which excludes stationary plants of railways and railroads and also incidental supply by mining and manufacturing plants, all previously included. Industrial classification comprises production and capacity of 4,158 industrial electric power plants of 100 kilowatts and over in 1945 including amounts for stationary electric power plants of railroads and railways eliminated from Electric Utility series as noted above. Installed capacity as of Dec. 31 except 1946 (Dec. 1)]

## No. 530.—ELECTRIC LIGHT AND POWER INDUSTRY—SUMMARY: 1902 TO 1937

[Figures cover all establishments engaged either in generation and distribution of electric energy, or distribution or transmission of electric energy, to public or private consumers. Statistics do not include establishments which consume all current generated, such as manufacturing and mining companies, railroads, railways, hotels, and other enterprises not in the nature of public utilities, unless a portion of their generated output is sold commercially. Plants operated by the Federal Government or by States were not included unless energy was sold commercially.]

<sup>1</sup> The term "establishment" as here used may represent a single electric station (either generating or distributing or both) or a number of such stations operated under the same ownership. <sup>2</sup> Not available.

<sup>3</sup> Comprises 1,112 stations operated by steam, 1,283 by internal-combustion, 1,426 by water, and 208 composite (stations having more than 1 type of prime mover).

<sup>4</sup> Comprises generated output and energy purchased and received from other sources. Since the energy "Received from other sources" was, in a large part, purchased from other electric light and power companies, a considerable duplication is involved, as such energy would also be included in the "Generated."

<sup>5</sup> Includes "Estimated value of free service."

<sup>6</sup> Number on June 30.

<sup>7</sup> Reported by commercial establishments only. No data for municipal establishments.

<sup>8</sup> Not comparable with figures for other years since amount includes only salaries and wages chargeable to electric operating service.

<sup>9</sup> Includes value of plant and equipment, \$602,000,000, owned by companies engaged in the operation of electric light and power plants and other public utilities, not distributed among the several utilities.

<sup>10</sup> In addition, hopped fuel, sawmill, and other waste were reported.

# No. 534.—WATER POWER—DEVELOPED, 1920 TO 1945, AND ESTIMATED UNDEVELOPED. JANUARY 1947

[In thousands of kilowatts. Developed water power for 1945 and prior years represent rated kilowatt capacity of electric generators operated by actual installations of water wheels and turbines. Amounts prior to 1939 include generator capacities of electric utility plants only (see headnote, table 525) as generator capacities of industrial plants not generally available. 1939 and 1945 industrial figures not directly comparable; in many instances appear to be in close agreement. Water wheel and turbine capacity of industrial and miscellaneous plants, expressed in horsepower, and including mechanical drive plants (of 395,000 horsepower in 1939) not having electric generators were: 1921, 1,720,573; 1925, 1,750,323; 1930, 1,665,932; 1935, 1,929,404; 1939, 2,122,228.]

<sup>1</sup> Low type includes soil-surfaced, gravel or stone, and low-type bituminous; high type includes high-type bituminous, Portland cement concrete, brick, block, and dual-type surfaces.

<sup>2</sup> Mileages shown are in addition to those forming a part of State highway systems or included with local road mileages reported.

<sup>3</sup> Total includes 58,427 miles, not classified by type, for the following States: Calif., 20; Ind., 886; Minn., 57,168; Utah, 274; Va., 77.

<sup>4</sup> Includes 3,425 miles of State park, forest, and reservation roads.

<sup>5</sup> Estimated from 1945 data submitted by State. Approximately 2,200 miles of national forest highways, recorded heretofore as roads under Federal control, are now shown as part of the local system.

## No. 588.—DISBURSEMENTS OF STATE-HIGHWAY FUNDS, BY STATES: 1921 TO 1945

[Includes disbursements, whether from current revenues or proceeds of loans, for construction, maintenance, interest and principal payments on highway bonds, transfers to local units, and miscellaneous disbursements. Beginning 1935 covers calendar years; figures for earlier years for many States represent fiscal years. Beginning with 1940, figures not comparable with those for prior years as they include data for certain State income applicable to highways, namely, proceeds of highway-user imposts allotted, without passing through State highway departments, by State treasurer for (1) county and other local roads and streets and for (2) nonhighway purposes. These data not included in prior years]

## **20. Transportation, Air and Land—Steam and Electric Railways, Express Companies, Motor Busses, and Civil Aeronautics**

**Steam railways.**—Because of the long period in which it has been subject to close Federal regulation and the degree of its consolidation, there is an extensive coverage of important statistical items relating to the railway industry. The *Statistics of Railways in the United States*, published annually by the Interstate Commerce Commission since 1888, is the most important source for steam railway statistics. Various other periodical reports are also issued by the Interstate Commerce Commission. The Association of American Railroads supplements official railway statistics with various releases.

The term "steam railways" as used in this section includes electrified divisions operated by such carriers. The total steam railroad mileage of the United States comprises: (a) Regular interstate carriers (and their nonoperating subsidiaries) reporting to the Interstate Commerce Commission, (b) switching and terminal railroads, also reporting to the Commission; and (c) private railroads (defined by the Commission as "circular" because they report on brief circulars and as "unofficial"). Except in certain mileage data the circular and unofficial companies are not included in any of the statistics. The switching and terminal roads were formerly included with operating railways, but are now separated, and data for them do not appear in most of the tables.

Nonoperating subsidiaries include proprietary companies, which are covered by the reports of operating carriers, and lessor companies which have no traffic and whose reports appear only in statistics of capitalization, dividends, and investment.

Operating railways are divided into three classes, according to the amount of their annual operating revenues, class I, having more than \$1,000,000 of such revenue; class II, from \$100,000 to \$1,000,000; and class III, less than \$100,000. During recent years more detailed reports are required from class I carriers than from smaller companies. The basis of the figures in each table is indicated by notes. Omission of class II and class III railroads affects very little the comparability of statistics with those of earlier years as regards most items, since the bulk of the business is done by class I.

The Interstate Commerce Commission divides railroads geographically into three districts and eight subsidiary regions. Each railroad is treated as a unit and placed wholly in some one district or region. Broadly speaking, the eastern district includes territory east of Chicago and north of the Ohio and Potomac Rivers; southern district, territory east of the Mississippi River and south of the Ohio and Potomac Rivers; and western district, the remainder of the country.

**Electric railways.**—The Interstate Commerce Commission issues annually an abstract of the annual reports of electric railways, chiefly interurban, which report to it. The American Transit Association publishes street railway statistics in its annual *Transit Fact Book*. The Bureau of the Census has published a quinquennial report on electric railways from 1902 to 1937. In the more recent years the report also covered affiliated trolley-bus and motor bus operations. The Census of Electrical Industries was not taken for 1942.

**Motor carriers.**—Statistics of class I for-hire carriers (those with \$100,000 or more of gross annual operating revenues) are compiled by the Interstate Commerce Commission from annual, quarterly, and monthly reports submitted to it by these carriers. This series begins with 1939 data.

The annual review and statistical number of Bus Transportation, a McGraw-Hill publication, summarizes operations of common carriers and school busses.

**Civil aeronautics.**—The Civil Aeronautics Administration of the Department of Commerce compiles statistics on civil aviation. These data now appear in the *Statistical Handbook of Civil Aviation*, an annual publication of the Civil Aeronautics Administration, first issued in 1944.

**No. 556.—STEAM RAILWAYS—MILEAGE OWNED AND MILEAGE OPERATED: 1890 TO 1945**

[Excludes switching and terminal roads beginning with 1910 (they operate about 3,800 miles of main tracks). First and second columns cover all railways, including "circular" and "unofficial" lines; last 5 columns omit "circular" and "unofficial" lines. Mileage owned excludes all duplication and covers continental United States only. Mileage operated includes some duplication under trackage rights and some mileage in Canada operated by United States companies]

### No. 560.—STEAM RAILWAYS (ALL REPORTING COMPANIES)—EQUIPMENT IN SERVICE: 1928 TO 1945

"All reporting companies" include switching and terminal but not circular and unofficial lines. Data for tractive effort and capacity of cars exclude switching roads, also smaller roads during recent years, they would not be materially different if all carriers were included. Excludes the large number of cars owned by private car lines.

**No. 577.—STEAM RAILWAYS—REVENUE FREIGHT ORIGINATED AND CARRIED,  
BY COMMODITY GROUPS, ALL ROADS, 1906 TO 1915, CLASS I ROADS, 1916 TO 1945**

[In thousands of tons of 2,000 pounds. For years ended June 30 prior to 1916, calendar years thereafter. Excludes switching and terminal roads beginning with 1908. Figures for 1911 to 1915, inclusive, exclude class III roads but this affects comparability very slightly; those after 1916 exclude both class II and class III, thereby reducing grand total about 6 percent. Excludes nonrevenue freight; this is a large item in the case of a few commodities notably coal]

**No. 578.—STEAM-RAILWAY ACCIDENTS—NUMBER OF PERSONS KILLED AND INJURED,  
BY STATUS: 1891 TO 1945**

[For various reasons, including the fact that returns were required under different acts, the statistics are not strictly comparable. Prior to 1921, train accidents were those causing damage to railway property in excess of \$150 or any damage and a resulting casualty. Thereafter they were considered as such when the damage exceeded \$150 with or without a casualty. Where the damage is less than \$150 and there is a reportable casualty it is classified as a train-service accident. Figures for years 1911-15 include industrial and other nontrain accidents to employees only, and for years 1908-10 do not cover switching and terminal roads. Otherwise the statement covers all reportable accidents, including those due to suicide, mental derangement, and attempting to escape custody]

**No. 583.—ELECTRIC RAILWAYS—SUMMARY: 1890 TO 1937**

[The census of street railways, which was first taken in 1890, and which has been taken at quinquennial intervals through 1937 beginning with the inquiry for 1902, covers (1) all street railways, without regard to kind of motive power, and (2) all interurban railways using other than steam as motive power. The nonelectric railroads included are those operated principally by cable and gasoline engines. Operations of electrified divisions of steam-railway companies are not included. Figures in this table do not include data for motorbus and trolley-bus operations of electric street railways. (For motorbus and trolley-bus statistics from census reports, see source)]

<sup>1</sup> Excludes data for 22 companies, operating on a part-year basis. These companies reported 36,810,221 passen-  
gers; 9,108,000 car-miles; 1,042,866 car-hours; \$2,388,295, operating revenue; and \$2,412,010, operating expense.

<sup>2</sup> Includes certain companies in Pennsylvania which maintained separate organizations, though controlled  
through stock ownership by other companies. For 1912 these companies were treated as merged and not included  
in the number reported.

<sup>3</sup> Includes small mileage of track lying outside United States.

<sup>4</sup> Data incomplete. Some of the companies engaged in both light-and-power and electric-railway operations  
were unable to report separately the values of plant and equipment assignable to their railway activities.

<sup>5</sup> Number reported as of June 30, for 1890, 1922, 1927, and 1932; for 1902, average for the year; for 1912, as of Sept.  
16. Figures for 1937 represent an average of numbers reported on June 30 and Dec. 31.

<sup>6</sup> Includes 324 trolley-bus operators.

<sup>7</sup> Includes 29,721,000 trolley-bus passengers.

<sup>8</sup> Includes auxiliary operating revenues of \$8,908,000 for 1927 and \$91,242,000 for 1922; auxiliary expenses, \$7,622,000  
for 1927, and \$49,232,000 for 1922. Data for operating revenues and operating expenses of auxiliary operations  
excluded so far as possible for earlier years.

<sup>1</sup> Amortization represents a very small part of this total.

<sup>2</sup> Does not include Federal or State income taxes.

<sup>3</sup> Withdrawals of sole proprietors and partners.

<sup>4</sup> Based on 643 carriers in 1940.

<sup>5</sup> Does not include drivers of equipment engaged by these carriers to perform "purchased transportation."

<sup>6</sup> Includes collection and delivery employees as follows: 1942, 19,010, compensation, \$34,862,000; 1943, 21, compensation, \$44,402,000; 1944, 21,111, compensation, \$48,778,000.

<sup>7</sup> Based on 934 carriers.

<sup>8</sup> Based on 1,019 carriers.

<sup>9</sup> Includes duplications on account of tonnage received from connecting motor carriers.

<sup>10</sup> Figures for 1940 are based on 606 carriers, they do not include carriers which reported expense for "purchased transportation" in excess of 5 percent of total "operation and maintenance" expenses.

<sup>11</sup> Basic figures include expenses of operating vehicles in intercity and local services; these expenses are separable. Comparisons of revenue and expense per intercity vehicle-mile are therefore subject to qualification.

<sup>1</sup> Class I airports are for private owners of smaller type aircraft; class II, private owners of larger type aircraft and feeder transport aircraft; class III, present day transport aircraft; class IV and V, largest aircraft now in use and those planned for immediate future.

<sup>2</sup> Indicates airports which exist but do not come up to class I standards.

<sup>3</sup> Includes Army, Navy, Army operated and Navy operated (latter two are municipal or commercial airports temporarily taken over by Army or Navy), C. A. P., miscellaneous Government and private.

## 21. Waterways, Water Traffic, and Shipping

Data in this section cover the following areas unless otherwise indicated: From Board of Engineers of the United States Army, Bureau of Census, Bureau of Customs, and Bureau of Foreign and Domestic Commerce, United States customs area which includes Alaska, Hawaii, and Puerto Rico, and, from Jan. 1, 1935, through Dec. 31, 1939, Virgin Islands; from United States Maritime Commission and War Shipping Administration, continental United States. Beginning with 1946, data on water-borne foreign commerce will be compiled by Bureau of Census.

**Units of measurement.**—"Cargo tonnage" represents weight of cargo in long tons (2,240 pounds) or short tons (2,000 pounds). All other tonnage figures refer to capacity of vessels. The terms gross and net tonnage refer to space measurement, 100 cubic feet being called 1 ton. Gross tonnage is the capacity of the entire space within the frames and the ceiling of the hull, together with those closed-in spaces above deck available for cargo, stores, passengers or crew, with certain minor exemptions. Net or registered tonnage is what remains after deducting from the gross tonnage the spaces occupied by the propelling machinery, fuel, crew quarters, master's cabin, and navigation spaces. It represents substantially space available for cargo and passengers. The net tonnage capacity of a ship recorded as "entered with cargo" may bear little relation to actual weight of cargo. Dead weight tonnage is the weight in long tons required to depress a vessel from light water line (that is, with only the machinery and equipment on board) to load line. It is therefore the weight of the cargo, fuel, etc., which a vessel is designed to carry with safety. Displacement tonnage (naval vessels) has reference to weight of the vessel itself with its normal equipment, fuel, etc.

<sup>1</sup> Comprises the following with figures for 1945: Harbor traffic of New York, Philadelphia, and San Francisco, 52,173,000 tons; local traffic of other seaports, 38,479,000; domestic traffic of lake ports, 14,923,000.

<sup>2</sup> Excluding St. Marys Falls Canal traffic (112,983,000 tons in 1945) and additional Detroit River traffic (16,533,000 in 1945), data for which are already included in figures for Great Lakes traffic, also excluding duplications relating to rivers and canals themselves.

<sup>3</sup> Principally coastwise and lake traffic passing through canals and connecting channels other than the St. Marys Falls Canal and Detroit River.

<sup>4</sup> Estimated from figures in this table on assumption that all deductions represent duplications in domestic traffic, includes some minor duplications in figures for foreign traffic.

## No. 595.—COMMERCE OF PRINCIPAL UNITED STATES OCEAN PORTS: 1945

[In thousands of short tons of 2,000 pounds. In addition to commerce here shown, many ports have (1) commerce with ports on internal rivers and canals; (2) purely local port traffic, including, for New York, Philadelphia, and San Francisco, what is called intraport traffic between parts of a harbor for which separate statistics are maintained. These forms of traffic, although aggregate tonnage is large, are of much less economic importance than foreign and coastwise traffic]

## 22. Irrigation and Drainage

[Data in this section relate to Continental United States]

### No. 622.—IRRIGATION ENTERPRISES—SUMMARY: 1910 TO 1940

[Data are for the 17 Western States and Arkansas and Louisiana. Tables 622 to 631 relate to irrigation enterprises of all types, including those operated by individual farmers. They are based on reports of management of enterprises. An enterprise is defined as "an independent irrigation establishment and includes works for supplying water and land for which water is supplied, except that cost and value of land is not included in capital invested"]

<sup>1</sup> Warren Act contracts are those which provide for sale of excess water to irrigation districts, i. e., water over and above project requirements. Lands served are usually located outside project proper. The act also provides for joint construction and financing of irrigation works by Federal Government and irrigation districts. <sup>2</sup> Totals for all crops represent net areas after deducting areas subsequently used for other crops or pasture; detail is total area in cultivation, no deductions being made for duplicated areas. <sup>3</sup> Bales of 500 pounds each. <sup>4</sup> Payments received from Federal and commercial agencies.

# No. 640.—DRAINAGE ON FARMS AND DRAINAGE ENTERPRISES—SUMMARY: 1920, 1930, AND 1940

[Statistics for drainage on farms in first part of this table were collected from individual farmers, while those for drainage enterprises were obtained from a special canvass of organized drainage enterprises. A farm may have artificial drainage without being included in any organized enterprise; conversely, an organized enterprise may include a farm on which there is no artificial drainage, because the enterprise facilitates removal of water from that farm. Drainage enterprises comprise public corporations and local improvement districts established under State laws relating to drainage, commercial enterprises draining land for sale, other organizations engaged in extensive land drainage work, and tracts of 500 acres or more drained by individual farm owners. Enterprises may include timbered and other unimproved land not yet in farms. Data as to drainage on farms were not collected in the census of 1940. Canvass of drainage enterprises did not include New England States, N. Y., N. J., or Pa.; Del. and Md. were included only in 1940; no enterprises were found in Ala. or W. Va. before 1940, and none in Va. in 1920]

## 23. Agriculture—General Statistics

Statistics on agriculture are for the most part prepared by the Bureau of the Census, Department of Commerce, which conducts the Census of Agriculture and by the Department of Agriculture which prepares current estimates.

Beginning with 1840 a Census of Agriculture has been taken every 10 years in conjunction with the Decennial Census of Population. In 1925, 1935, and 1945 a mid-decennial Census of Agriculture has also been taken. Information at each census has been obtained by a personal canvass of individual farms by census enumerators. The first Census of Agriculture, however, was limited in scope. It included such items as an inventory of the principal classes of domestic animals, the production of wool, the value of poultry, the value of products of the dairy, and the production of the principal crops. The number of farms and the acreage and value of farm land were first included in the Census of 1850. In 1880 information was first secured as to the tenure under which the farms were operated. A detailed classification of farm land according to use was first obtained in 1925; in earlier censuses, farm land was classified only as improved land, woodland, and other unimproved land.

A farm as defined by the Bureau of the Census is all the land on which some agricultural operations are performed by one person, either by his own labor alone or with the assistance of members of his household, or hired employees. A tract of less than 3 acres is not considered a farm unless its agricultural products for the year covered were valued at \$250 or more. Agricultural operations consist of the production of crops or plants, vines or trees (excluding forestry operations), or of the keeping, grazing, or feeding of livestock for animal products, animal increase, or value enhancement. Included as farms are such agricultural enterprises as nurseries, greenhouses, hot-houses, fur farms, mushroom cellars, apiaries, and cranberry bogs. Excluded are fish farms, fish hatcheries, oyster farms, frog farms, kennels, game preserves, parks, and the like. When a landowner has one or more tenants, renters, croppers, or managers, the land operated by each is considered a farm for census purposes. Thus for a plantation each cropper and tenant operation is considered a separate farm even though the entire plantation may be handled essentially as a single farm enterprise.

The land in farms includes considerable areas of land not actually under cultivation or used for pasture or grazing, but all such land must have been under the control of the operator and considered a part of his farm. Land used for grazing or pasture that was neither owned nor leased by the farm operator was not included under land in farms. Thus vast acreages of land used for grazing, such as national forests, Taylor grazing land, State lands, or other public lands, and some railroad and other privately owned lands, are not included as land in farms even though used for agricultural purposes.

Annual agricultural statistics of a wide variety have been issued currently by the United States Department of Agriculture for over 80 years—the first being as of May 1, 1863. There are now 41 field offices—1 in practically every State—which act as clearinghouses for information furnished by voluntary reporters. Information from the field offices is sent to Washington where reports covering State and national data are issued by the Crop Reporting Board of the Bureau of Agricultural Economics.

Statistics compiled by the Bureau of Agricultural Economics on crops, livestock and livestock products, agricultural prices, farm employment, and other related subjects are based mainly on data obtained through mail questionnaires. The basic information is obtained from nearly three-quarters of a million reporters, located in every agricultural county in the United States, who report on one or more items during a year. These reporters, mostly farmers, report for their own and nearby farms on some 80 crops and scores of other items pertaining to agricultural production and farm family living.

Cash income is the cash receipts from farm marketings and represents the quantities of crops, livestock, and livestock products sold by farmers multiplied by the prices received per unit of production at the local market. Gross farm income includes Government payments, value of farm products consumed on the farm, rental value of farm homes, as well as cash receipts from farm marketings.

These general notes on agriculture apply also to section 24, Agriculture—Production and Related Subjects, which covers farm crops, foodstuffs, farm animals, animal products, and related subjects.

<sup>1</sup> Estimates.

<sup>2</sup> Estimate for total population as of Jan. 1, 1945, including armed forces overseas; estimates for urban and rural as of July 1, 1945, for civilian population only.

<sup>3</sup> For definition of urban and rural, see p. 2.

<sup>4</sup> 1930-45 farm population comprises all persons living on farms regardless of occupation, except that 1945 figures exclude persons in dwelling units rented to other than farm operators. 1920 figures include also those farm laborers (and their families) who, while not living on farms, lived outside limits of any incorporated place. Further difference is due to fact that 1920, 1935, and 1945 censuses were taken in January, while 1930 and 1940 censuses were taken in April, when number of persons on farms is appreciably larger. For additional farm population data, see tables 13 and 15, pp. 15 and 17.

<sup>5</sup> Land used only for pasture that had been plowed within 7 years.

<sup>6</sup> Pasture other than cropland and woodland.

<sup>7</sup> Cropland harvested, crop failure, cropland idle or fallow, and pleasurable pasture.

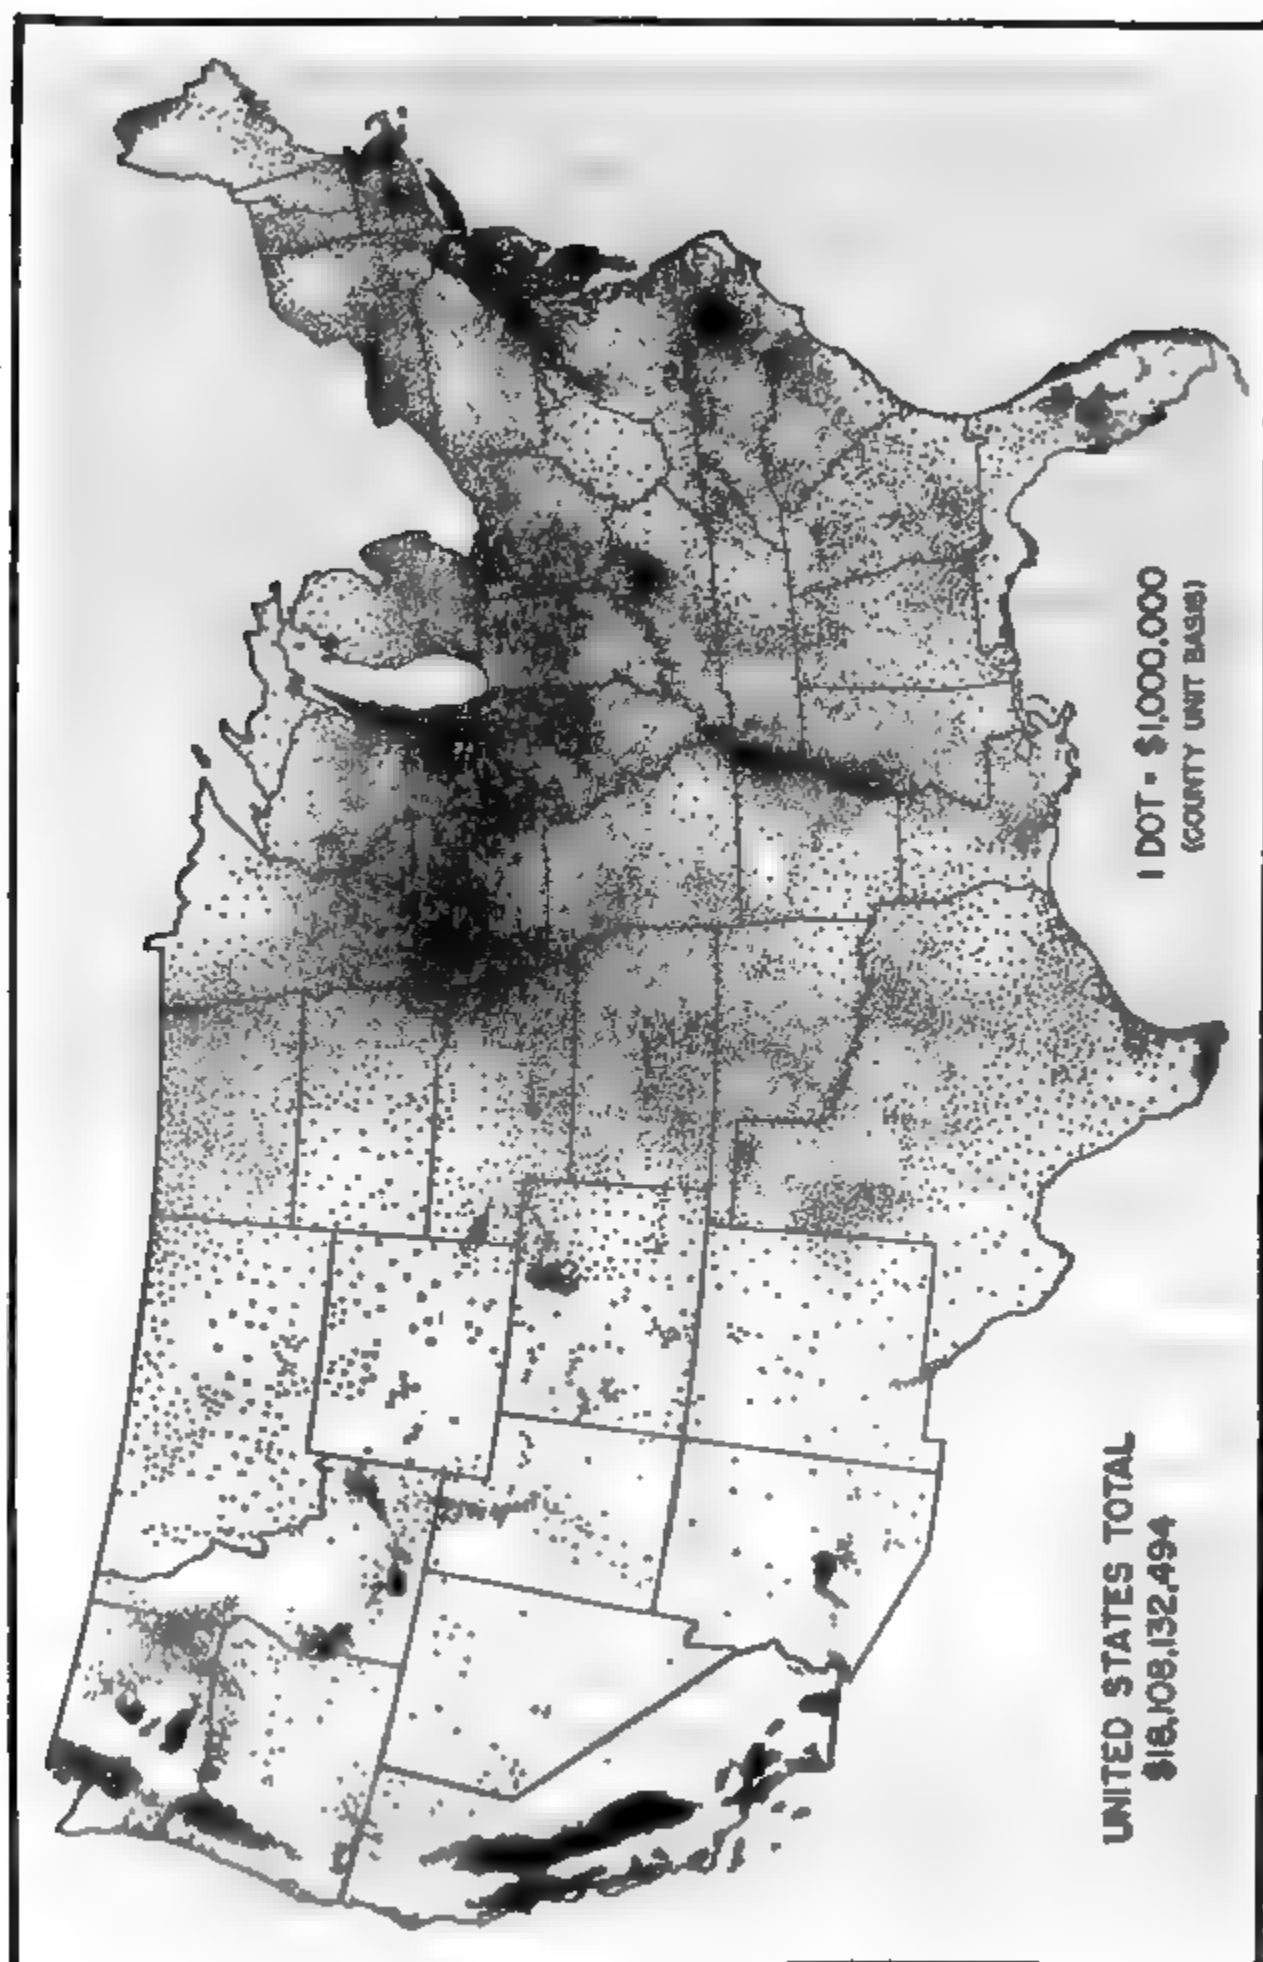

<sup>8</sup> "Improved land", figures nominally include land available for crops and land occupied by buildings, yards, and barnyards.

<sup>9</sup> Value is of specified farm property, not all farm property.

<sup>10</sup> 1945 figure represents value of horses, mules, cattle, hogs, sheep, goats, and chickens, in addition to those items, 1940 figure includes value of poultry other than chickens, bees, and fur animals in captivity. For 1940 figures comparable with 1945, see table 645, p. 587. For items and age groups included for earlier years, see 1940 Census of Agriculture Reports, Vol. III, for figures comparable to 1945, see 1945 Census of Agriculture Reports, Vol. II.

<sup>1</sup> Differences between these totals and totals for farms regardless of additional land owned do not represent data for operating owners who owned additional land. Some operators did not make a report as to this item. For 1930, operators who did not report as to this item are included with those operators who reported that they owned no additional land.

**No. 675.—FARMS—NUMBER AND PERCENT DISTRIBUTION, BY TYPE: 1940 AND 1945**

[For 1940, farms were classified by type on basis of major (single largest) source of income in 1939. For 1945 (value refers to calendar year 1944), farms with value of products used by farm household exceeding total value of all farm products sold were classified as subsistence farms. All others were classified by type of product representing more than 50 percent of total sales; if no one source of income represented more than 50 percent of total sales, the farm was classified as "General"]

## No. 684.—FERTILIZER CONSUMPTION, 1880 TO 1945, AND BY STATES, 1943 TO 1945

(In thousands of tons of 2,000 pounds. Based on tag sales, records of Government officials, or estimates. Beginning 1935, figures include tonnage distributed by Agricultural Adjustment Administration and by Tennessee Valley Authority, data for the latter representing fiscal years ended June 30. Data for phosphate rock used in Illinois and Florida, available only since 1939, have been excluded from annual comparisons. In addition to tonnage for consumption, fertilizers and fertilizer materials produced in continental U. S. are exported to island possessions.)

## 24. Agriculture—Production and Related Subjects

The data in this section are, for the most part, from the Bureau of the Census, Department of Commerce, and from various bureaus in the United States Department of Agriculture. In general, statistics for agriculture census years are from the Bureau of the Census. Estimates for intervening years, and adjustments, where necessary, to a January 1 basis are from the Bureau of Agricultural Economics, United States Department of Agriculture.

The most extensive of the current survey data are gathered by the Bureau of Agricultural Economics from questionnaires handled in cooperation with the Post Office Department through its rural mail carriers. These surveys obtain livestock data in June and December and crop acreage data in October. For each survey the rural carrier distributes 10 to 20 cards to farmers on his route. The farmer is asked to complete his questionnaire for his own farm and return the card to his mail box.

In the data prepared by the Bureau of Agricultural Economics, estimates of crop acreage and production for the census years are set up currently on available information. Later, if necessary, these data are revised to a level based largely on the census enumerations. The estimates for intercensal years are based on sample data obtained each year from individual reporters. This information is supplemented by other data, such as State assessors' enumerations of agricultural information, crop meter frontage measurements, reports of carlot shipments, warehouse receipts, local surveys, personal observations by field statisticians as well as reports from other sources having a knowledge of farming, agricultural production, and processing. Cotton acreage and production are also based on sample data and, in large measure, on ginning information gathered by the Bureau of the Census. Usually, all known sources of information pertaining to agriculture in general, from the farm to the consumer's household are tapped for basic facts used in compiling current statistics on agriculture.

For each decade from 1840 through 1900, the Census of Agriculture was taken as of June 1. The four decennial censuses since then have been taken as of April 15, 1910; January 1, 1920; April 1, 1930; and April 1, 1940. The 1925, 1935, and 1945 quinquennial Censuses of Agriculture were taken as of January 1. Comparison of inventory numbers of livestock from census to census is seriously affected by a change in the date of enumeration. From January to April there are material changes in numbers on hand in most parts of the country due to births, marketings, farm slaughter, etc. In an effort to obtain as much comparability as possible the 3 censuses taken in April either excluded recently born animals from the enumeration or provided for their enumeration in a separate age group. Volume II of the 1945 Census of Agriculture Reports shows a complete history of the enumeration of livestock and presents a discussion of the comparability from census to census.

For most kinds of domestic livestock, there are comparatively short, cyclic fluctuations in numbers, even though the trend over a long period of time may be definitely in one direction. A single census may be taken at a time when such a cycle is at the peak or at the trough of numbers and hence gives no true indication of the long-time trend.

Annual inventory numbers of livestock on farms prepared by the Department of Agriculture together with estimates of livestock, dairy, and poultry production are based on information furnished by individual farmers, supplemented by State assessors' data in a number of States, and by such records as brand inspections, rail and truck shipments, and inspected slaughter. The level for these inventories is based in large part on census enumerations for years when census data are available.

Information on prices received by farmers for products they sell and prices paid for articles they buy for production and family living are obtained from about 85,000 farmers, local merchants, and handlers of agricultural products. Season average prices received by farmers are calculated by weighting midmonth prices by monthly sales during the crop marketing season, beginning with the first month when a particular crop harvest begins.

The index numbers of prices received and of prices paid by farmers consist of the aggregate value of a fixed quantity of goods, based on current midmonth prices for these commodities, expressed as a percentage of the aggregate value of the same quantity of goods in the base period. The ratio of the index of prices received to the index of prices paid by farmers measures the monthly variation in the per unit exchange value of farm products.

Data in imports and exports are now compiled by the Department of Commerce, Bureau of the Census, and are published in the annual report, Foreign Commerce and Navigation of the United States. (See section 30, Foreign Commerce of the United States.) The official trade statistics based on the fiscal year are usually preferable to data presented on a calendar year basis, for use in comparing imports and exports with crop production since, for most crops, they coincide more nearly with the crop year.

[1935-39=100. Indexes based on estimates of production for sale and for consumption in farm homes. Excludes products fed to livestock or used for seed. Calendar year production of livestock and livestock products is compared with crop production of same year. Commodities covered by index contributed about 93 percent of gross farm income during 1935-39]

## No. 699.—ACREAGE LOSSES—ESTIMATED ACREAGES OF CERTAIN CROPS PLANTED AND NOT HARVESTED: 1929 TO 1946

[In thousands of acres. Acreages for winter wheat represent areas sown preceding fall and not harvested, thus including considerable land subsequently planted to other crops. Acreages for cotton include more than 10 million acres plowed under in 1933. Excludes acreages of grains cut for hay. Totals do not show total crop losses chiefly because of large acreage of hay land which produced only pasturage in some dry seasons]

<sup>1</sup> Excludes 14,343,000 acres of corn cut for fodder, valued at \$206,935,000, probably duplicated in acreage of corn harvested for grain. 3,107,000 acres of mature crops hogged off (corn, velvetbeans, soybeans, peanuts, sweet potatoes, etc.) also excluded.

<sup>2</sup> Total acreage of crops for which figures are available.

<sup>3</sup> Not available, or data not comparable.

<sup>4</sup> Irish and sweet potatoes included with "field crops," not with "vegetables." Acreage of vegetables represents acres of vegetables harvested for sale only, acreage in farm gardens not available. Value includes both vegetables for home use and for sale.

<sup>5</sup> Excludes acreage of horticultural specialties (not available for 1944), value includes horticultural specialties.

<sup>6</sup> Excludes acreage for alfalfa, clover, and grass seeds harvested, probably duplicated in hay acreage.

<sup>7</sup> Only strawberries reported in small fruits; other small fruits included in field crops.

<sup>8</sup> Vegetables for sale.

<sup>9</sup> Farm garden vegetables for home use only.

<sup>10</sup> Acreage in fruit orchards, vineyards, and planted nut trees not secured prior to 1930.

<sup>11</sup> Excludes acreage for horticultural specialties.

<sup>1</sup> Figures for 1800 to 1895 represent commercial movement, as given by Dan Talmage's Sons Co.

<sup>2</sup> Louisiana and Texas, 1906 to 1923 Louisiana only, 1924 to 1927, Louisiana and Florida, beginning 1928.

<sup>3</sup> Data for linters included 1810-1865, excluded for subsequent years.

<sup>4</sup> Beginning 1899, ginnings as reported by Bureau of Census. Figures for some years include small amounts of Baja California, Mexico, cotton ginned in United States. Round bales counted as half bales.

<sup>5</sup> Gross weight. Figures prior to 1899 compiled by Bureau of Census from reports published by Department of Agriculture. See also note 10, table 703, p. 640.

<sup>6</sup> Exports.

<sup>7</sup> Census figures for the previous year.

<sup>8</sup> Figures for 1870 and 1880 represent estimated average production for 1863-71 and 1880-82, respectively.

**No. 708.—PRINCIPAL CROPS—ACREAGE, PRODUCTION, AND VALUE: 1866 TO 1946**

[Tons are of 2,000 pounds. For weights of units of measurement for principal products, see Appendix, p. 970.

Approximate weights of units of measurement for other products are as follows: Number of pounds to a bushel—sweetpotatoes, 55; sorghums for grain, 56; clover seed, 60. Number of pounds to a barrel of cranberries, 100.

Prices and yields for periods are weighted averages except for cotton and cottonseed, which are simple averages of prices and yields for individual years. Acreage, production, and yield of all crops revised to census data]

<sup>1</sup> Values are based on season average or Dec. 1 prices. See notes on "Price" column.

<sup>2</sup> Received by farmers. Beginning 1908, prices are season average prices for the crop-marketing season; prior thereto, Dec. 1 prices. Prices for 1937, 1940, and 1941 for corn, 1938 through 1942 for wheat, and 1940 through 1944 for rye, include an allowance for unredeemed loans at average loan value.

<sup>1</sup> Values are based on season average or Dec. 1 prices. See notes on "Price" column.

<sup>2</sup> Received by farmers. Prices are season average prices as follows: Barley, buckwheat, and flaxseed, beginning 1906; rice, beginning 1909. Prices for prior years are as of Dec. 1. Prices for 1940 through 1942 for barley and 1942 and 1943 for flaxseed include an allowance for unredeemed loans at average loan value.

<sup>1</sup> Values are based on season average or Dec. 1 prices. See notes on "Price" column.  
<sup>2</sup> Received by farmers. Beginning with 1908 for potatoes and cotton, 1910 for sweetpotatoes, and 1909 for cottonseed, prices are season average prices. Figures for prior years are Dec. 1 prices. For 1933, 1934, 1937, 1938, and 1940 through 1942, season average prices for cotton crops include an allowance for unredeemed loans at average loan value.  
<sup>3</sup> Average for 8 years.      <sup>4</sup> Average for 6 years.      <sup>5</sup> Average for 7 years.      <sup>6</sup> Average for 4 years.  
<sup>7</sup> Includes 7,492,000 bushels in 1924, 96,000 bushels in 1931, and 2,175,000 bushels in 1932 not harvested on account of market conditions. Price and value apply only to the harvested portion of the crop.  
<sup>8</sup> State production figures, which conform with census annual ginning enumeration, with allowance for cross State ginnings, rounded to thousands and added for United States totals. Cotton grown in Baja, California, ginned in California from 1913 to 1924, has been excluded.  
<sup>9</sup> Production is in running bales prior to 1899; 500-pound gross weight bales thereafter.  
<sup>10</sup> Data for 1909 and 1910.  
<sup>11</sup> Area in cultivation July 1 less removal of acreage reported by the Agricultural Adjustment Administration, less abandonment on area not under contract.

Values are based on season average or Dec. 1 prices. See notes on "Price" column.  
Received by farmers. See also notes on prices for each crop.  
Based on the reported price of grain sorghums.  
Prices are season average prices, prices of beans being for cleaned beans.  
Average for 1929 and 1930.  
Farm value of dry edible beans equals the price of cleaned beans applied to the production of cleaned beans rather than to the total production.  
Average for 1924 and 1925.  
Dec. 1 prices, 1916 to 1931; beginning 1932, season average prices.  
Includes 5,436,000 pounds in 1935, 4,365,000 pounds in 1937, 3,140,000 pounds in 1938, and 2,813,000 pounds in 1939, not available for marketing because of economic conditions and the marketing agreement allotments.  
Prices and values are computed on the harvested crop.

<sup>16</sup> Equivalent solid acreage.  
<sup>19</sup> Bags of 100 pounds (uncleaned).  
<sup>21</sup> Average for 1919 and 1920.

<sup>1</sup> Values based on season average or Dec. 1 prices. See notes on "Price" column.

<sup>2</sup> Received by farmers. Prices as of Dec. 1 except as noted.

<sup>3</sup> Prices are season average prices beginning 1919; Dec. 1 prices theretofore.

<sup>4</sup> All hay.

<sup>5</sup> Dec. 1 price. Prior to 1942, price of sweet sorghums for forage and hay.

<sup>6</sup> Average for 1929 and 1930.

<sup>7</sup> Prior to 1939, data are for 7 States. Production figures include fruit consumed on farms, sold locally, and used for manufacturing, as well as that shipped; they exclude fruit which ripened on trees but was destroyed prior to picking. Figures relate to crop produced from bloom of year shown. In California, picking season usually extends from about Oct. 1 to Dec. 31 of following year. In other States, season begins about Oct. 1.

<sup>8</sup> Prices are season average.

<sup>9</sup> Net content of boxes varies. In California and Arizona, approximate average is 77 lbs.; in other States, 90 lbs.

<sup>10</sup> Season average returns to growers. Price and value apply to entire crop exclusive of that portion donated to charity, unharvested, and/or eliminated on account of market conditions. (See note 34.) Prices are equivalent packing-house-door returns for all methods of sale and are weighted by production to obtain U. S. averages.

<sup>11</sup> Production includes following quantities donated to charity, unharvested, and/or eliminated on account of economic conditions: 1933, 977; 1934, 1,398; 1935, 614; 1936, 1,023; 1937, 1,204; 1938, 2,949; 1939, 1,236; 1940, 1,322; 1941, 762; 1942, 654; 1943, 830; 1944, 1,771; 1945, 722. Price and value are computed on remaining crop.

# No. 712.—COTTON AND COTTONSEED—ACREAGE, PRODUCTION, AND VALUE, BY STATES: 1911 TO 1946

[Cotton production excludes linters. Figures for production in some States differ slightly from census figures on ginnings due to ginnings in 1 State of cotton grown in another. Where figures are not shown for individual States separate data are not available for entire period but are included in United States totals. Values shown are for marketing season or crop year and should not be confused with calendar year income. Yields and prices for periods are simple averages of figures for individual years. Tons are of 2,000 pounds]

<sup>1</sup> Growth of 9 months in Louisiana and 12 months in Florida. Sugar campaign usually not ended before February in Louisiana and April in Florida, following season of growth of cane.

<sup>2</sup> Calculated by the Agricultural Adjustment Administration method. (S. R. Series 1, No. 1.)

<sup>3</sup> Based on the ratio of 100 pounds of raw sugar to 93.46 pounds of refined sugar.

<sup>4</sup> Not including sirup production. See table 724.

<sup>5</sup> Includes price support payments of \$1.45 per ton in 1945. Excludes Government payments under Sugar Act of \$1.21 per ton in 1946 and approximately \$1.25 in 1946.

<sup>1</sup> Age of cane equals 18 to 22 months of growth.

<sup>2</sup> See note 2, table 725.

<sup>3</sup> One ton of raw sugar 96° test is assumed to be equivalent to .9346 ton of refined.

<sup>4</sup> Based on tonnage of cane used.

<sup>1</sup> For factor used in converting raw sugar to refined, see note 8, table 730.<sup>2</sup> Ton of 2,000 pounds.<sup>3</sup> Actual quantity of sugarcane harvested, including 6,392,547 tons of sugarcane cut for production of sugar, and 1,135,914 for production of high-grade molasses. It is estimated that about 1,935,542 tons of sugarcane were left standing and harvested following year.

<sup>1</sup> Includes Puerto Rico, Hawaii, Phil. Isl., and beginning 1910, Virgin Islands not shown separately.

<sup>2</sup> Beet sugar not converted to raw prior to 1909. Refined reduced to raw basis by multiplying by 1.07.

<sup>3</sup> For 1900 to 1906, shipments to United States.

<sup>4</sup> Statistics for 1874 to 1889 represents exports. Normal grinding season begins Oct. 1. In 1933, production was from grindings of Oct. 1, 1933, to Dec. 31, 1934; beginning 1934, from grindings of the next calendar year.

<sup>5</sup> Exports 1871 to 1911, production 1912 and subsequently. Includes production of muscovado and pachoche, low grades of sugar mostly for domestic consumption.

<sup>6</sup> Less than 500 tons.

<sup>7</sup> One year only.

<sup>8</sup> Not available.

<sup>9</sup> Louisiana and Texas 1909 to 1923; Louisiana only 1924 to 1927; Louisiana and Florida beginning 1928.

<sup>1</sup> Beginning 1910, stocks on hand are taken into account. Figures for 1910-20 are for cane sugar only; 1922-34 includes stocks of raw cane sugar in all ports and beet sugar held by factories, according to trade sources. Beginning 1935, includes stocks of raw and refined sugar held by refiners, by importers and distributors of direct consumption sugar, and by beet sugar factories, as reported by Sugar Division, U. S. Department of Agriculture.

<sup>2</sup> Beet sugar converted to raw at rate of 1.075 through 1930.

<sup>3</sup> Includes Hawaii, Puerto Rico, and the Philippines; Virgin Islands included beginning July 1, 1917.

<sup>4</sup> No account taken of sugar imported in other forms. Imports from Philippine Islands excluded beginning July 1, 1900, and from Virgin Islands beginning July 1, 1917; reexports deducted through 1922; imports for consumption beginning 1933.

<sup>5</sup> Includes shipments to Hawaii and Puerto Rico for all years, to Alaska beginning 1932, and Virgin Islands beginning Jan. 1, 1935. Excludes direct exports to foreign countries through customs districts of noncontiguous territories.

<sup>6</sup> Sugar used in manufacture of other commodities for exports on which drawback was paid, taken into account beginning 1910.

<sup>7</sup> Includes sugar available for military services in U. S. and abroad for 1941-45.

<sup>8</sup> Raw sugar converted to refined by multiplying by following factors: For years prior to 1922, 0.9369; 1922-29, Cuba and Hawaii, 0.9353; Puerto Rico, 0.9366; Philippine Islands, 0.96; all others, 0.932; beginning 1931, Hawaii, 0.9317; Puerto Rico, Philippine Islands, and Virgin Islands, 0.946; Cuba and all others, 0.9418.

<sup>1</sup> Exports assumed to be wholly from sugar imported from foreign countries.

<sup>2</sup> Hawaii, Puerto Rico, and Philippine Islands and beginning July 1, 1917, Virgin Islands.

<sup>3</sup> Not available.

Sources: 1875 to 1939, computed from production as reported by Department of Agriculture, and exports, imports and shipments as reported by Department of Commerce, Bureau of Foreign and Domestic Commerce; thereafter, based on data in tables 729 and 730.

# No. 782.—COTTON—PRODUCTION, CONSUMPTION, EXPORTS, IMPORTS, PRICES, AND CARRY-OVER: 1905 TO 1946

[All figures, except average net weight and price, in thousands of bales. Production figures relate to crop of preceding year and are compiled from individual reports of ginner. Beginning 1911, price per pound represents average price received by growers, as computed by Department of Agriculture; for earlier years, it is average price of average grade marketed in New Orleans prior to April 1 of following year. Consumption figures relate to 12 months during which crop of specified year was chiefly marketed, and not to calendar year. Export and import figures (compiled by Bureau of Foreign and Domestic Commerce through April 1941, Bureau of Census thereafter) relate to 12 months beginning Sept. 1 for years prior to 1915, and to 12 months beginning Aug. 1, thereafter. Figures for linters are included in those for consumption prior to 1909, and in export figures prior to 1915. Separate figures for linters prior to those years not available. See 1937 Statistical Abstract, table 659, for figures for years prior to 1905]

## No. 785.—ANIMAL AND VEGETABLE FATS AND OILS—PRODUCTION, CONSUMPTION, AND STOCKS: 1945 AND 1946

[Data cover factory operations only, and therefore exclude considerable quantities of lard, tallow and grease produced on farms and by local butcheries and small renderers, and quantities consumed and held in homes, hotels, restaurants, bakeries, and quantities consumed and held by painters, building contractors, garages, etc. Stocks include amounts held by and in transit to producers, factory consumers and public storages, but exclude amounts held in private storages by retailers, wholesalers and jobbers. Additional data on consumption and stocks of raw materials, such as cottonseed, copra, corn germs, flaxseed, soybeans, etc., and consumption data by process and end-use are contained in Facts for Industry Series M17-1 and M17-2]

<sup>1</sup> Data from peanut-oil producers were collected by U. S. Dept. of Agriculture.<sup>2</sup> Included in "all others" to avoid disclosing operations of individual establishments.<sup>3</sup> Included in cod oil.<sup>4</sup> Data for "other fish" consumption during 1946 indicate an excess of approximately 20,000,000 pounds over supply. This may be accounted for, in part, by duplication in consumption of 6,127,000 pounds reported once by hydrogenators and again when further processed by fat splitters and other users. Other consumption duplication involving similar cases, plus possible understatement of production, may account for the remaining discrepancy.<sup>5</sup> Not shown to avoid disclosure of operations of individual establishments.

## No. 751.—DOMESTIC ANIMALS ON FARMS—NUMBER AND VALUE: 1880 TO 1947

[For census years prior to 1910 and for Jan. 1 estimates by Dept. of Agriculture, animals of all ages are included except in figures for cattle and sheep, 1880 and 1890, which are nominally exclusive of calves and lambs, respectively. Difference in date of enumeration affects comparability of census figures for all classes and especially for swine.]

# **NO. 762.—MEATS AND LARD—PRODUCTION, FOREIGN TRADE, AND CONSUMPTION, BY KIND: 1937 TO 1945**

[All amounts, except per capita, in millions of pounds. Pork production represents total hog-carcase weight, less raw fat from carcase rendered into lard. Other meat production represents dressed carcase weight only, with edible byproducts excluded. Lard production represents rendered weight of lard. Uninspected production includes farm, retail, and nonfederally inspected wholesale slaughter. Exports and imports of meats comprise the several kinds of meat converted to a dressed-carcase-weight basis. Lard exports represent rendered lard, including neutral lard. Exports include shipments to Alaska, Hawaii, Puerto Rico, and Virgin Islands. Consumption represents production plus imports less exports, with allowance for changes in storage stocks. Figures for recent years are subject to revision]

## No. 776.—WOOL—PRODUCTION, IMPORTS, AND EXPORTS: 1839 TO 1945

(In thousands of pounds. Production, except census data, estimated and for calendar years; figures for 1839 and later years, revised estimates, based on 1985 census data. Pulled wool included beginning 1900 and probably included for 1870 to 1899, though exact basis of estimates for these years is not known. Figures for 1839, 1849, and 1859 include only fleeces. Exports and imports for 1839 are for fiscal year ended Sept. 30; for 1849 and 1859, fiscal years ended June 30; subsequently, calendar years. Imports and foreign exports prior to 1914 and domestic exports for all years include hair of Angora goat, alpaca, and other like animals.)

## **25. Forests and Forest Products**

The Bureau of the Census, Department of Commerce, and the Forest Service, Department of Agriculture, are the principal Government agencies engaged in the collection and publication of statistics of forest land, forest industries, and forest products. The Forest Service, through its forest survey activities, is making an inventory of the forest resource and is measuring rates of forest growth and drain. A number of reports for surveyed areas have been published. The most recent of these are a series of reports based on a reappraisal of the Nation's forest situation made during 1945 and 1946. Tables on forest areas, stand, growth, and drain (Nos. 782-785) are from the preliminary report of this series, Basic Forest Statistics for the United States. Other reports from this series are (1) Gaging the Timber Resource of the United States, (2) Potential Requirement for Timber Products in the United States, (3) The Management and Status of Forest Lands in the United States. Other reports to follow these will deal with different aspects and the situation as a whole. Other publications of the Forest Service include data on stumpage and log prices, lumber consumption and distribution, lumber used in manufacture, and fire statistics. The Statistical Supplement to the Annual Report of the Chief of the Forest Service carries statistics of the administration of the national forests.

The Bureau of the Census, Department of Commerce, publishes information on forest industries and products in reports of the Census of Manufactures, in addition to annual reports of the Census of Forest Products. The Bureau of the Census also publishes statistics of foreign trade in forest products. Information on the domestic movement of forest products is reported by the Interstate Commerce Commission and the Association of American Railways.

The Bureau of Agricultural and Industrial Chemistry of the Department of Agriculture publishes annual reports of the production of naval stores.

The Bureau of Labor Statistics of the Department of Labor publishes statistics of wholesale lumber prices monthly and annually.

The Timber Products and Pulp and Paper series of the Industry Reports, published by the Bureau of Foreign and Domestic Commerce in cooperation with other government agencies, carry forest products statistics which have been developed to meet current needs for information.

A number of forest products trade associations and trade journals collect and publish statistics of forest products, production, markets, shipments, inventories, etc.

The completeness and reliability of published statistics of forests and forest products vary considerably. The data for forest land area and stand are, of course, much more reliable for areas which have been surveyed than for those areas which have not been covered. Forest fire statistics for federal lands are considered much better than for private lands, though too much reliance should not be placed in any estimates of fire damage or causes of fires.

In the field of forest products, data for lumber production and other manufactured products such as veneer and plywood, pulp and paper, cooperage, naval stores, etc., are much more complete than for the primary forest products such as poles and piling, fuelwood, and fence posts. As explained in the headnotes to the following tables, however, the data for lumber production are subject to certain limitations because of incomplete coverage. Information for pulp and paper, and plywood, on the other hand, are believed to be practically complete. Statistics relating to average value of lumber sawed may be subject to some special limitations due to under representation of small mills.

<sup>1</sup> Within established boundaries. Area under Forest Service Administration includes federally owned lands in purchase units which have not been proclaimed as national forests, lands approved for acquisition, but un-acquired, experimental forests and ranges and all small federally-owned administrative sites outside of established boundaries, and lands within national forest boundaries which have been transferred from Soil Conservation Service and other Federal agencies but do not have a national forest status.

<sup>2</sup> Excludes those lands outside national forest boundaries transferred from Soil Conservation Service and other Federal agencies, and requiring Presidential or Congressional action to extend a national forest status.

<sup>3</sup> Outside established boundaries. Area under Forest Service Administration comprises lands acquired by United States in pursuance of certain national programs of land utilization and adjustment, which by Order of the Secretary of Agriculture have been placed under administration of Forest Service but have not yet been given a national forest status. Portions of these project lands, located within established national forest or purchase unit boundaries, are included as part of national forest or purchase unit acreage. Fort Bayard Reservation, New Mexico, was placed under administration of Forest Service by Federal Works Agency.

## No. 792.—LUMBER—PRODUCTION, BY KIND OF WOOD, AND AVERAGE MILL VALUE

Data not strictly comparable because of incomplete coverage of numerous small mills in the East prior to 1942 and exclusion of mills cutting less than 80 M ft. b. m. for all years prior to 1942 except 1899-1909, and 1919. Exclusion of under 50 M class of mills would affect totals less than 1 percent as reflected by 1942 survey. Data for 1943-44 include estimates for the East based on sample surveys. Small production quantities are subject to large sampling errors]

## No. 797.—LATH AND SHINGLES—PRODUCTION: 1899 TO 1945

[Lath in thousands and shingles in squares. Shingles reported in thousands prior to 1933 and converted to squares on basis of 800 shingles to square. See headnote, table 792 for explanation of lack of comparability of statistics. Data for shingles reasonably comparable over a period of years, because of complete enumeration of Red Cedar Shingle Industry, this industry's production comprising over 90 percent of total shingle production]

<sup>1</sup> Beginning 1914 includes screenings.<sup>2</sup> Includes data for existing mills not classified as producers of pulp before 1940. In that year data for 6 mills not previously classified as producers of wood pulp were included for first time. For same reason, an additional mill was included in 1941, and 2 more added in 1943.<sup>3</sup> Includes data for 25 existing mills not previously classified as producers of paper and paperboard.<sup>4</sup> Includes estimated production of insulating board for 1 mill. Estimates were made on assumption that production of this mill was proportionately the same in 1941 and 1942 as in 1943.

<sup>1</sup> Figures for turpentine and rosin from crude gum, beginning 1929-30, and from wood beginning 1933-34, relate to crop year ended Mar. 31. All other figures relate to calendar years.

<sup>2</sup> Figures compiled from data reported by establishments in Turpentine and Rosin industry.

<sup>3</sup> Figures compiled from data reported by establishments in Wood-Distillation industry.

<sup>4</sup> Not reported.

<sup>5</sup> Includes, for 1909 and 1914, 18,310 gallons and 92,401 gallons, respectively, of turpentine and, for 1914, 3,596 drums of rosin, reported by establishments engaged in manufacture of lumber and timber products.

<sup>6</sup> Estimated by J. E. Lockwood; complete data not available. Figures include estimates of rosin produced from reclaimed gum, as follows: 1932-33, 26,720 drums; 1933-34, 28,048; 1934-35, 27,200.

<sup>7</sup> Includes estimates by J. E. Lockwood for production of turpentine from steam-distilled wood.

<sup>8</sup> Includes data for rosin produced from reclaimed gum: For 1935-36, 43,350 drums; 1936-37, 34,155; 1937-38, 21,017; 1938-39, 31,983; 1939-40, 31,414; 1940-41, 20,181; 1941-42, 19,765; 1942-43, 11,297; 1943-44, 9,824; 1944-45, 8,066; 1945-46, 8,538.

<sup>9</sup> Figures do not include data for rosin produced from reclaimed gum. See note 8.

## 26. Fisheries

The Fish and Wildlife Service, Division of Commercial Fisheries in the Department of the Interior, conducts annual surveys for various statistical information on the fishery industries. These data are published in greater detail in publications of the Service and include data on the volume of the catch of individual species of fish and shellfish and their value, employment in the fisheries, quantity of gear operated, the number of fishing and transporting craft employed in the capture and transporting of fishery products, employment in wholesale and manufacturing establishments, and volume and value of the production of manufactured fishery products. In addition to the basic statistics on employment, yield, and the production of manufactured fishery products for individual States and various geographical sections, there are included in reports data on imports and exports of fishery commodities; landings by fishing vessels at Boston, Gloucester, and New Bedford, Massachusetts; Portland, Maine; and Seattle, Washington; shad fisheries of the Hudson and Potomac Rivers; alewife fishery in the Potomac; seed oyster fisheries; a review of the Pacific Coast halibut fishery; a statement on whaling operations by United States firms; data on the sponge fishery; and lists of firms producing various manufactured fishery products. These data are summarized in the Statistical Abstract. The more detailed information may be obtained from the Fish and Wildlife Service, Washington 25, D. C.

[Includes Alaska. A large portion of waste derived from canning, filleting, and dressing fish and shellfish is utilized in production of fish meal and oil in addition to whole fish used in manufacture of these products. In 1941 about 775,000,000 pounds of waste were used in production of meal and oil. In subsequent years about 600,000,000 pounds of waste were used for this purpose each year]

## 27. Mining and Mineral Products

This section summarizes the principal statistics relating to the mineral industries and mineral products. It includes not only the crude and prepared minerals associated with the mineral extraction, but also some of the finished products manufactured from minerals. Statistics relating to the manufacture of mineral products are also included in section 29, Manufactures. Additional information relating to the mineral industries and mineral products appear also in other sections of this Abstract such as the section on labor force, prices, foreign commerce, and others.

Most of the statistics in this section are from the Bureau of Mines and the Bureau of the Census, with additional material from other Government agencies such as the Bureau of Labor Statistics, Bureau of the Mint, and the Interstate Commerce Commission and from non-Government sources such as the Engineering and Mining Journal, American Metal Market, the Iron Age, and the American Gas Association. Data in this section cover the following areas unless otherwise indicated: Bureau of Mines production statistics, continental United States, and, for leading products, outlying areas; Bureau of Census statistics, continental United States; foreign trade statistics, the United States customs area, which includes Alaska, Hawaii, Puerto Rico, and for 1935 to 1939, the Virgin Islands.

Mineral statistics, with principal emphasis on commodity detail, have been collected annually or at more frequent intervals by the United States Geological Survey or by the Bureau of Mines since 1880. The principal statistics have been published annually through 1931 in *Mineral Resources of the United States* and thereafter in the *Minerals Yearbook*. Data available from Bureau of Mines publications include quantities and values of minerals produced, sold or used by producers, or shipped; quantities of minerals stocked; crude materials treated and prepared minerals recovered, by method of treatment; and mineral content of materials produced. Data on production are sometimes available by method of extraction. Shipments or sales of products are classified in many cases by grade, by end use, or by State of destination. The Bureau of Mines also collects and publishes separate data on employment and accidents. The number of workers and man-days or man-hours worked, as measures of exposure to accidents, are tabulated only for broad industry groups.

Censuses of mineral industries have been taken approximately every 10 years since 1840. The statistics are collected and published in the Census volumes in such a manner as to relate the statistics on the production of the various minerals as nearly as possible to data on employment, principal expenses, fuels and power consumed, and other information available only for each establishment as a whole. Each establishment is classified according to its most valuable product. The data are also collected and compiled in a manner to permit integration with other Census statistics such as for manufactures and wholesale and retail trade. Data are available on the number of operations, quantity and value of products, number of persons engaged (sometimes by department or type of work), principal expenses (wages, salaries, cost of supplies and materials, fuel, purchased electric energy, and work done on contract), horsepower of power equipment, and sometimes other items, such as man-hours, cost of buildings, machinery and equipment, number and type of power-loading machines, cost of drilling oil and gas wells, development work, and capital invested. Commodity statistics on many of the manufactured mineral products are also collected by the Bureau of the Census at monthly, quarterly, or annual intervals.

To avoid misinterpretation, it should be noted that the Census of Mineral Industries statistics in tables 823-825 relate to operations primarily engaged in extracting minerals

and in such primary mineral-preparation activities (crushing, screening, washing, flotation, etc.) as are needed to render the minerals marketable. Many of the statistics collected by the Bureau of Mines represent products of operations beyond the limits covered by the Census of Mineral Industries. Value totals based on Bureau of Mines publications, as shown in tables 819 and 822, are not comparable with the Census value totals, as shown in tables 823-825. Census values represent crude or prepared minerals f. o. b. the mine, well, or mineral-preparation plant. Bureau of Mines value totals include for most metallic products the value of ingot metal rather than the value of ores and concentrates, the value of natural gas at points of consumption rather than at wells, and the value of such manufactured products as cement and lime rather than the value of the limestone used in producing them.

## No. 822.—MINERAL PRODUCTS OF THE UNITED STATES—QUANTITIES AND VALUES: 1930 TO 1945

[Short tons are 2,000 pounds; long tons, 2,240 pounds. Data cover continental United States and, for leading products, outlying areas. Certain of the figures represent shipments rather than quantity mined, and some of the figures for 1945 are preliminary. Total values of metallic and nonmetallic products include figures which Bureau of Mines is not at liberty to publish and estimated figures for which data are not available. In some cases, neither quantity nor value can be shown and these products are not listed here but data for them are included in totals. (In the other hand, values for certain products, such as coke, are excluded from totals to eliminate duplication, since values of products derived therefrom, or of raw materials used, are accounted for under other items)]

### PRODUCTS OF THE UNITED STATES—QUANTITIES AND VALUES: 1930 TO 1945

<sup>1</sup> In products, such as coke, are excluded from totals to eliminate duplication, since values of products are included in the totals for the United States and, for leading products, outlying areas. Certain of the figures represent shipments rather than values of metallic and nonmetallic products include figures which Bureau of Mines is not at liberty to release. In some cases, neither quantity nor value can be shown and these products are not listed.

<sup>1</sup> From both domestic and foreign ores. Beginning 1935, data represent antimonial lead produced at primary refineries from both primary and secondary sources, and are not comparable with data for prior years, estimate of value of primary antimony and lead content of antimonial lead from domestic sources included in total value of metallic products.

<sup>2</sup> Content of antimonial lead. Value of the antimony in antimonial lead excluded from total value.

<sup>3</sup> Largely from foreign ore beginning 1935. Value not included in total value. Bureau of Mines not at liberty to publish value figures or quantity figures for 1940-1943.

<sup>4</sup> Figures not available or Bureau of Mines not at liberty to publish them; value included in total value of metallic or nonmetallic products.

<sup>5</sup> Represents dried bauxite equivalent.

<sup>6</sup> Product from domestic ores only.

<sup>7</sup> Value does not include premiums paid miners by the Government. Total premiums for copper, lead, and zinc amounted to approximately \$73,000,000 in 1943, \$83,000,000 in 1944, and \$73,000,000 in 1945.

<sup>8</sup> According to Bureau of the Mint, valued at \$20.67 + per ounce through 1930, at \$35 per ounce in 1935 and subsequent years.

<sup>9</sup> Value not included in total value, see footnote.

<sup>10</sup> Value calculated at nominal price, 27 cents per pound.

<sup>11</sup> Figures not available. Value of products derived therefrom, or of raw materials used, is included elsewhere.

<sup>12</sup> According to Bureau of the Mint.

<sup>13</sup> Figures obtained through cooperation with Bureau of the Census. For 1940, total is estimate based on figures issued by Bureau of the Census as somewhat incomplete. For

1943-45 there was no canvass; total is

estimate was made for sand-lime brick and refractories for 1940 and subsequent

<sup>14</sup> Includes brown coal and lignite, and vanilla.

<sup>15</sup> Quantities as reported by Department

Division; values include selling expenses.

<sup>16</sup> Gypsum mined. For 1940 and subsequent

years, value as sold (crude and calcined).

<sup>17</sup> Figures cover fiscal year ended June 30 of year.

<sup>18</sup> Includes mica recovered by grinding mica schist,

<sup>19</sup> Figures not available; value of iron ore sold for pig-

metallic products.

<sup>20</sup> Sublimed blue lead, sublimed white lead, leaded zinc oxide, and zinc oxide.

<sup>21</sup> Figures not available.

<sup>22</sup> No canvass. Estimate of value included in total value of nonmetallic products.

<sup>23</sup> Includes soapstone used as dimension stone.

<sup>24</sup> From copper and zinc smelters and zinc roasters and from roasting of high-sulfide

gold and silver concentrates.

<sup>25</sup> For 1930 figures exclude soapstone. For 1935 and thereafter, figures cover talc,

pyrophyllite, and ground soapstone. Dimensional soapstone is included in stone. Value

of soapstone in 1930 is included in total value of nonmetallic products; Bureau of Mines

not at liberty to publish figures.

<sup>1</sup> Companies with operations in more than 1 industry are counted only once in totals.

<sup>2</sup> See note 3, table 825.

<sup>3</sup> See note 4, table 825.

<sup>4</sup> See note 5, table 825.

<sup>5</sup> See note 6, table 825.

<sup>6</sup> Represents permanent additions and major alterations (including installation costs); minor additions and replacements and cost of land are excluded.

<sup>7</sup> See note 9, table 825.

<sup>8</sup> Not shown because of dissimilar products.

<sup>9</sup> Includes amounts received by or due contractors for services performed during year.

<sup>10</sup> Includes statistics for 334 salaried employees paid \$1,091,000 at central offices that served more than 1 mineral industry.

<sup>11</sup> Contractors performing oil- and gas-field services were not asked to report expenditures for supplies and materials, fuel, purchased electric energy, or contract work, and contractors performing general services for mineral industries were not asked to report expenditures for contract work. These expenditures are not included in totals shown. Expenditures by "Contract-service operations" duplicate in part expenditures for "Contract work" reported by producing operations.

<sup>12</sup> Oil- and gas-field contractors were not asked to report expenditures for buildings, machinery, and equipment, and contractors performing general services for mineral industries were asked to report only combined expenditures for these items, which amounted to \$150,000. These expenditures are not included in totals shown.

<sup>13</sup> Crude petroleum, 1,238,123,816 barrels (42 gallons); natural gas, 2,929,184,338 M cubic feet, of which 2,267,413,338 M cubic feet were marketed.

<sup>14</sup> Thousands of gallons.

<sup>15</sup> Includes data for 38 strip-pit and culm-bank contractors.

\* Contractors engaged chiefly in development work for other concerns in mineral industries; Pennsylvania anthracite strip-pit and culm-bank contractors are excluded. Statistics for contractors performing oil- and gas-field services exclude data for oil- and gas-field work performed on contract by concerns that also operated oil and gas wells for their own account unless separate reports were obtained for each of these two types of activities. Statistics are also excluded for concerns rendering oil- and gas-field services or producing crude petroleum, natural gas, or natural gasoline whose reports covering these activities indicated that neither the value of products and services rendered, nor reported principal expenses, nor cost of buildings, machinery, and equipment, nor cost of drilling and equipping wells amounted to as much as \$2,500 during 1939. Statistics for contractors performing general services for mineral industries exclude data for contractors that received or were due less than \$2,500 for work done during 1939.

† Represents amounts received or due for services performed during year.

\* Statistics cover, in general, only those operations that had reported principal expenses or cost of buildings, machinery, and equipment during year of at least \$2,500; for common sand and gravel corresponding minimum was \$15,000. Statistics include data for oil- and gas-field operations in States in which the reporting concerns had no products, provided the concerns were large enough to come within the scope of the census as defined in head-note of table 825.

## No. 825.—MINERAL INDUSTRIES—SUMMARY FOR THE UNITED STATES: 1919, 1929, AND 1939

[Statistics cover producing operations only. In general, those for 1939 cover only those operations (or concerns producing crude petroleum, natural gas, and natural gasoline, and rendering oil- and gas-field services) for which total value of all products, reported principal expenses, cost of buildings, machinery, and equipment during year, or cost of drilling and equipping wells during year amounted to \$2,500 or more. For bituminous coal and lignite an output criterion of 1,000 tons of coal was substituted for value of all products. Statistics for common sand and gravel industry exclude data for operations that produce less than 15,000 tons of sand and gravel unless reported principal expenses or cost of buildings, machinery, and equipment during year amounted to \$15,000 or more. Statistics for 1929 cover, in general, only those "enterprises" for which total value of all products or cost of development work amounted to \$2,500 or more. Bituminous coal and lignite mines that produced less than 1,000 tons of coal and common sand and gravel operations that produced less than 25,000 tons of sand and gravel, were excluded. Statistics for 1919 exclude data for "enterprises" for which value of all products was less than \$500 or cost of development work was less than \$5,000. Noncommercial production of stone and sand and gravel obtained from mines or quarries operated by governmental agencies, public utilities, or by construction companies or contractors producing wholly for their own use or on contract for governmental agencies is excluded for all years]

<sup>1</sup> Excludes statistics for common clay and shale, crude petroleum and natural gas, green sand, natural gasoline, peat, potash, and rock salt industries, for comparability with 1929.

<sup>2</sup> Excludes common clay and shale, common sand and gravel, glass sand, foundry sand, natural sodium compounds, peat, potash, and rock salt industries, and limestone mines and quarries operated in conjunction with cement and lime plants for comparability with 1919.

<sup>3</sup> Includes value of crude minerals produced, value added during year by preparation processes, receipts for services performed for other concerns, and value of electric energy generated and sold.

<sup>4</sup> Represents statistics for skilled and unskilled employees who perform manual labor, use tools, operate machines, handle materials, and care for property. Average numbers of wage earners were derived by adding numbers reported for each month and dividing sums by 12.

<sup>5</sup> Represents statistics for salaried employees at operations and at central and branch offices, including officers of corporations, managers, superintendents, and other supervisory personnel, responsible professional and technical employees, and clerical employees. Number of salaried employees represents number receiving pay on a representative or normal day or pay-roll period—for 1939, during normal pay-roll period ending nearest Oct. 14; for 1929, on Dec. 14 or on nearest representative day; for 1919, on Dec. 15 or on nearest representative day. Salaries represent total amount paid to salaried employees during calendar year.

<sup>6</sup> Represents statistics for proprietors and firm members at operations and at central and branch offices.

<sup>7</sup> Census statistics not available.

<sup>8</sup> For 1939 includes installation costs, which are excluded for 1929.

<sup>9</sup> Statistics for 1939 and 1929 refer to equipment in use or available for use at end of year.

<sup>10</sup> Includes equipment, with rating of 8,000 horsepower, operated by purchased power other than electric energy.

### No. 827.—COPPER—PRODUCTION, EXPORTS, IMPORTS, AND CONSUMPTION: 1910 TO 1945

[In short tons (2,000 pounds). Production figures for unrefined copper cover United States and Alaska. Output of copper from foreign crude materials also shown under refined copper production. Consumption as shown represents quantity withdrawn from total new supply on domestic account (apparent consumption) not actual consumption, largely because consumers' inventories are not taken into account. Over a period of years, however, apparent consumption data give a good indication of consumption trends]

## No. 830.—COPPER—EXPORTS AND IMPORTS: 1891 TO 1945

[Exports are those classed as "domestic" in foreign trade statistics but include copper smelted or refined in United States from imported ore or unrefined metal. Values include all forms of copper; quantities represent all copper except the small item, "Other manufactures." Copper content of exports of ore for years 1891-1916 and of imports for years 1891-1903 was estimated]

No. 887.—GOLD AND SILVER—PRODUCTION IN CONTINENTAL UNITED STATES, ALASKA, PUERTO RICO, AND PHILIPPINE ISLANDS: 1792 TO 1945

[Value of gold in terms of money, being at a fixed rate, is not shown in this table. Gold was valued at \$20.67+ per fine troy ounce from 1837 until 1933. In 1933, however, various higher prices prevailed subsequently to Executive order of Aug. 29. Value of gold production for that year, as computed by Bureau of Mines, was \$65,338,000, including \$12,485,000 premium calculated at average weighted price (\$25.56 per ounce). On Jan. 31, 1934, legal value of gold was fixed at \$35 per fine ounce. Value given for silver is commercial value, except for 1921 to June 1923 and for 1934 and subsequent years (see footnotes 1 and 2), for which periods it has differed materially from coinage value]

## No. 889.—SILVER—PRICES, LONDON AND NEW YORK, AND VALUE IN THE DOLLAR: 1835 TO 1945

[London price is converted to basis of ounce 1,000 fine and converted to American money at par of exchange through 1900; thereafter, at current rate of exchange. London quotations are in depreciated currency after Sept. 21, 1931, also for some prior years, including 1918 to 1924. New York quotations are in depreciated currency after early March 1933. Commercial ratio is computed on basis of London quotations through 1914; thereafter, on basis of New York average price. Beginning 1934, monetary value of gold is \$35.00 per fine ounce, as against \$20.67+ in previous years. Value of fine silver (371.24 grains) in dollar is computed on basis of London quotations through 1917; thereafter on basis of New York average price]

## No. 842.—COAL—PRODUCTION, 1821 TO 1945, AND BY STATES, 1921 TO 1945

[Quantities in thousands of short tons (2,000 pounds); values in thousands of dollars. Figures relate to mines having an output of 1,000 tons or more a year for 1919, 1921, 1924 and subsequent years. Includes coal consumed at mines. Figures for anthracite relate to Pennsylvania output only; those for bituminous relate to continental United States and Alaska. Bituminous coal includes lignite and small amounts of anthracite outside Pennsylvania. Comparatively little coal is held in stock at the mines]

<sup>1</sup> Geological Survey and Federal Power Commission. Represents consumption by public utility power plants in power generation, including a small quantity of coke amounting to approximately 100,000 tons annually.

<sup>2</sup> U. S. Bureau of Census.

<sup>3</sup> Association of American Railroads. Represents consumption by class I railways for all uses, including locomotive, powerhouse, shop, and station fuel. The I. C. C. reports that in 1944 consumption for all uses by class I line-haul railways plus purchases for class II and class III railways, plus purchases by all switching and terminal companies combined, was 130,303,000 tons of bituminous coal and lignite. Similar data from I. C. C. not yet available for 1945. <sup>4</sup> Includes a small amount of anthracite.

<sup>5</sup> Estimates based upon reports collected by Solid Fuels Administration from a selected list of representative manufacturing plants and retail dealers.

<sup>6</sup> "Retail dealer deliveries" have been revised to include truck shipments from mines formerly included in "Other industries." <sup>7</sup> Included in "Other industries."

### No. 848.—NATURAL GAS AND NATURAL GASOLINE—PRODUCTION, 1906 TO 1945, AND BY STATES, 1930 TO 1945

[Quantities of gas in millions of cubic feet, of gasoline in thousands of gallons; values in thousands of dollars.

Production figures for gas refer only to that marketed, in addition to which considerable quantities are used by producers, and large quantities are wasted or lost. Values given are at point of consumption. Consumption figures by States differ greatly from production figures by reason of interstate transportation]

### No. 850.—MANUFACTURED-GAS AND NATURAL-GAS INDUSTRIES—SUMMARY: 1929 TO 1944

[Population served and number of customers in thousands, gas produced, purchased, and sold in millions of cubic feet; revenue in thousands of dollars. Data for manufactured-gas industry revised to exclude completely operations of companies which have changed over to distribution of natural gas at any time between 1929 and end of 1944. Data for natural-gas industry include those companies. Utilities distributing mixed gases with heating values higher than 900 B. t. u. per cubic foot are classified as natural-gas utilities. All butane or propane gases, or mixtures of such gases with air, included in manufactured-gas statistics. Natural gas sold for field use or for carbon black production is excluded]

## 28. Construction and Housing

### No. 870.—CONSTRUCTION IN THE UNITED STATES—ESTIMATED EXPENDITURES FOR PRIVATE AND PUBLIC CONSTRUCTION: 1929 TO 1946

[Represents value of work put-in-place during year; consequently differs from building permit and construction contract data which measure value of work started. In addition, coverage generally broader than permit and contract data. Includes value and cost of installation of equipment which is integral part of structure, but not that of machinery, shipbuilding, or land costs. Annual estimates, 1915-38, comparable with data below, available in Office of Domestic Commerce, Bureau of Foreign and Domestic Commerce]

<sup>1</sup> Estimates of new private nonfarm residential construction prepared by Bureau of Labor Statistics.

<sup>2</sup> Public industrial building not segregable from private construction in 1939-1932.

Source: Estimates of new construction for 1939-46 are joint estimates of Dept. of Commerce, Bureau of Foreign and Domestic Commerce, and Dept. of Labor, Bureau of Labor Statistics, other data except as indicated in note 1, are estimates of Bureau of Foreign and Domestic Commerce. Current estimates are published monthly in the Industry Report on Construction and Construction Materials and Survey of Current Business.

## No. 871.—NEW DWELLING UNITS IN NONFARM AREAS, BY TYPE: 1920 TO 1946

[Figures are estimates covering construction of all new family dwelling units in nonfarm area of United States, based upon building-permit reports. This area consists of all urban and rural nonfarm places. Urban designation is applied to all incorporated places with a population of 2,500 or more in 1940, and, by special rule, to a small number of unincorporated civil divisions. Rural nonfarm construction includes all construction for non-agricultural use in unincorporated areas and incorporated places of less than 2,500 population. Hence, urban construction is classified by location, whereas rural nonfarm construction is classified according to the intended use of individual buildings]

# No. 874.—CONSTRUCTION CONTRACTS AWARDED IN 37 STATES—VALUE OF CONSTRUCTION AND FLOOR SPACE OF BUILDINGS, BY CLASS OF CONSTRUCTION: 1927 TO 1946

[For State figures, see table 875. Public works and public utilities cover some projects not measurable in terms of floor space, such as highways, pipe lines, subways, etc. Statistics for the 37 States were not compiled for years prior to 1928, but available figures covering a varying number of States for earlier years have been published in the 1932 and previous issues of the Statistical Abstract. Figures for the individual States and districts in table 875 represent the value of construction contracts awarded in the States and districts where the work was actually done.]

[Values in millions of dollars; floor space in thousands of square feet]

## No. 876.—CONSTRUCTION CONTRACTS AWARDED—INDEXES OF VALUE: 1920 TO 1946

[1923-25 average=100. Indexes are derived from monthly figures of construction contracts awarded reported by F. W. Dodge Corporation. Reports covered 37 States beginning with May 1924 and a varying number for earlier years. In order to obtain comparable figures from 1919 to date, total value of construction contracts awarded in 37 States was estimated for January 1919 through April 1924. Seasonal adjustments computed separately for "residential" and "all other" types of construction and the two series combined. Indexes based on a 3-month moving average, centered at middle month. For more detailed description of indexes, see Federal Reserve Bulletin for July 1931]

## No. 877.—ENGINEERING CONSTRUCTION CONTRACTS AWARDED—VOLUME, BY TYPE: 1925 TO 1946

[In millions of dollars. Covers continental U. S. construction projects of following minimum costs through 1945 (except for 1932-35): Waterworks, excavation, drainage, and irrigation, \$15,000; other public works, \$25,000; industrial buildings, \$40,000; other buildings, \$150,000. For 1946, these minimums were raised to \$22,500, \$40,000, \$55,000, and \$205,000, respectively, to account for rise in construction costs. For 1932-35, minimums used were: \$10,500, \$17,500, \$28,000, and \$105,000]

**No. 879.—BUILDING CONSTRUCTION IN CITIES OF 50,000 OR MORE INHABITANTS—  
VALUE OF ALL CONSTRUCTION AND NUMBER OF NEW DWELLING UNITS: 1942  
TO 1946**

[Valuation figures are derived from estimates of construction costs made by prospective builders when applying for permits to build and value of contracts awarded by Federal Government. No land costs are included. For type of building covered see table 872. Cities shown had a population of 50,000 and over in 1940]

<sup>1</sup> Preliminary. <sup>2</sup> Classified as urban under special rule by Bureau of the Census, 1940.

<sup>3</sup> Figures represent applications filed. <sup>4</sup> Not available.

<sup>5</sup> Data for 1942-44 represent applications filed, but have been adjusted to eliminate large projects identified as representing post-war plans. Data for 1945 and 1946 represent work actually started, based on inspections instead of on applications filed, as in previous years.

Source: Department of Labor, Bureau of Labor Statistics: 1942-43 from annual reports on building construction; subsequent annual and current data for cities of 100,000 or more published in monthly releases; data for cities 50,000 to 100,000 from records not published elsewhere.

<sup>1</sup> American Appraisal Co. Average for 30 cities of 4 types of buildings: Wood frame, brick-wood frame, brick-steel frame, reinforced concrete. Mechanicals not included. Based on actual appraisal costs. Available for individual cities. Recently revised to include adjustments for social security taxes, unemployment insurance and corresponding "overhead."

<sup>2</sup> Associated General Contractors of America. Wages and materials for 12 cities combined in 40-60 ratio. Wages, prevailing rates for hod carriers and common labor. Materials, weighted: Sand, gravel and crushed stone, 1; cement, 1; lumber, 1; hollow tile,  $\frac{1}{2}$ ; structural and reinforcing steel,  $\frac{1}{4}$ .

<sup>3</sup> Engineering News Record construction cost index has 4 components: (1) Structural steel shapes, base price; (2) cement at Chicago; (3) lumber, which until 1935 was 12 x 12 long leaf yellow pine wholesale at New York, and since 1935 is 2 x 4 848 pine and fir in carload lots, ENR 20-cities average; (4) common labor, ENR 20-cities average of wage rates in force. This construction cost index is designed to predict changes in construction cost trends and to measure the movement of construction costs in general. It is not intended to apply to any specific class of construction or to a particular locality. ENR Building Cost Index: In practice, the construction cost index has been used widely to apply to building costs, and when common and skilled labor rates move in similar trends it is a satisfactory measure of relative building cost movement. However, following the low wage rates of 1932, common labor climbed much faster than skilled and reached new all-time highs by July 1937. The increase was in the lower ranges between union and nonunion. When "prevailing" wages became synonymous with union wages the gap closed up, hence the ENR 20-cities wage average increased more rapidly than the union rates. To provide a more representative measure of building cost movement, the skilled labor trend has been substituted for the common labor trend in the ENR Construction Cost Index, and the ENR Building Cost Index computed.

<sup>4</sup> E. H. Boeckh & Assoc., Inc. Individual series for 10 types of buildings for 16 areas. Weights based on studies of actual building costs—vary with different type of structures. Material prices are those paid by contractors to material dealers. Prevailing skilled and common wage rates from contractors. Base: United States average, 1926-29=100. Series given here is brick and concrete, New York, converted to 1913=100 base.

<sup>5</sup> Aberthaw. Until Mar. 31, 1946, New England, 7-story and basement (62' 4" x 202' 4"), reinforced concrete building built in 1914, repriced quarterly as a construction bid to duplicate original building; labor costs based on current experience with similar construction. Since Mar. 31, 1946, New England, composite of 36 major cost items in 3 multi-story and 2 one-story industrial buildings, including all mechanical trades, repriced using actual and estimated labor and material costs.

<sup>6</sup> George A. Fuller Company. Composite of 36 major cost elements, in 3 commercial type buildings, including mechanicals, elevators, wiring, heating and ventilating, repriced.

<sup>7</sup> Turner Construction Co. Eastern Cities. Own building cost experience applied to these factors: Labor rates, material prices, productivity of labor, efficiency of plant and management, competitive conditions.

## No. 881.—MATERIALS CONSUMPTION FOR NEW CONSTRUCTION: 1944 AND 1945

[Data represent estimated quantities of materials required by construction activity, both public and private, in the United States. They are divided into 4 major categories: (1) Military, which covers Army and Navy establishments, camps, cantonments, hospitals, airfields and bases, storage facilities, etc. (2) Plant expansion, which includes the construction of industrial plants engaged in the production of ships, aircraft, and other war materials, (3) Housing, which represents civilian, nonmilitary housing, and (4) All other nonmilitary construction such as schools, hospitals, commercial establishments, streets, roads, sewer and water development, farm construction, and utilities. Estimates do not include materials consumed in the manufacture of machines, machine tool and processing equipment]

## No. 884.—CONSTRUCTION—SUMMARY, BY KIND OF CONTRACTOR, BY SIZE GROUPS: 1939

[The 1939 Census of Construction covered all persons or establishments whose principal business in 1939 was utilizing construction materials and labor in construction work for others, or for themselves for speculative and investment purposes, on projects located within the limits of continental United States. It included erection and installation departments of manufacturers and merchandisers, when it was an important but not necessarily major portion of their business enterprise. Force-account work, ship and boat building, and installation and servicing of domestic appliances were not included. "Work performed" represents contract or order value of work done by the contractor's or builder's own forces. Work sublet to others was not included as work performed in the report of the builder or general contractor, but was reported as part of the business of the special trade contractor who received the subcontract. "Construction work" includes alterations and repairs, as well as new construction and additions. Data for establishments reporting less than \$500 of work performed in 1939 are not included. The canvass is known to have been incomplete in coverage of small contractors who operated from their homes. Most of this shortage occurred in metropolitan districts. It is believed that this under-coverage affects materially only number of establishments and number of proprietors]

# No. 888.—CONSTRUCTION—SUMMARY FOR ESTABLISHMENTS REPORTING BUSINESS OF \$25,000 OR MORE, BY STATES: 1929 AND 1939

[1929 and 1939 comparisons must be limited to establishments reporting business of \$25,000 or more as the 1939 census covered only that size group. That size group in 1929 accounted for 77 percent of total value of work performed by all contractors and builders regardless of size. Geographic distribution is based on office address of reporting establishment, not location of construction project]

No. 896.—DWELLING UNITS, URBAN AND RURAL—ESTIMATED TOTAL MONTHLY RENT AND ESTIMATED TOTAL VALUE: 1940

[For urban and rural-nonfarm units, monthly rent and value include land; for farm units, farm land is excluded. Monthly rental data include contract rent of tenant-occupied nonfarm units and estimated rent of other units. Monthly rent of owner-occupied rural-farm units is an estimate based on 1 percent of reported value. Value of owner-occupied units represents the owners' estimate of the value. For tenant-occupied and vacant units value was estimated as 100 times the monthly rent. Value or rent of units for which these data were not reported was estimated by assuming that the average value or rent of such units was the same as the value or rent of reporting units in the corresponding tenure and occupancy group of the urban and rural areas of each region]

**No. 900.—DWELLING UNITS, URBAN AND RURAL-NONFARM—MEDIAN CONTRACT OR ESTIMATED MONTHLY RENT AND MEDIAN VALUE, BY TENURE: 1940**

[Monthly rental data include contract rent of tenant-occupied units and estimated rent of owner-occupied and vacant units. Figures for "All dwelling units" include vacant units. Median defined: That item which is in the middle of a series arranged according to size. Thus, the median rent is the rent which divides the total number of dwelling units into two equal groups, one having rents higher than the median and one having rents lower than the median]

## 29. Manufactures

**Census of Manufactures.**—The basic source of comprehensive data on manufacturing production has been the Census of Manufactures conducted by the Bureau of the Census. This census was taken decennially from 1849 to 1899, for each fifth year thereafter through 1919, and biennially from 1921 through 1939. During the recent war years the Census of Manufactures was abandoned as directed by Executive Order No. 9152 in the interests of more important work related to the Nation's war effort.

The quinquennial censuses—those of 1904, 1909, 1914, and 1919—covered all factories or plants whose products were valued at \$500 or more, but beginning with 1921, the minimum limit has been \$5,000. Conceptually an establishment is a geographically isolated manufacturing unit maintaining independent bookkeeping records, regardless of its managerial or financial affiliations. An establishment—which may be a single plant or a group of closely located plants operated by a single plant or a group of closely located plants operated by a single company without separate records for each—is the basic reporting unit. In addition, the establishment is the basic unit of industrial classification, being assigned to an industry on the basis of its reported product of chief value.

“Value of products” represents the selling value at the plant or factory. Because of the use of the products of some establishments as materials for others, the total cost of materials and the total value of products for all industries in a given group, and for all groups in the aggregate, include much duplication, estimated at roughly one-third of the gross value of products. Such duplication is not, however, found to any great extent within individual industries. “Value added by manufacture,” computed by subtracting “cost of materials, supplies, fuel, etc.,” from value of product, provides a rough measure of [the contribution of manufacturing processes to product values and is practically free of duplication.

Detailed quantity and value data on the output of manufactured products are compiled from reports of the Census of Manufactures. The “total value” figures for a group of products differ from the “value of products” of the corresponding industry as given in table 923. The product figures include the minor or secondary production of the commodity in plants engaged primarily in other lines of manufacture, whereas the industry figures which relate to the total output of a group of plants primarily engaged in a particular industry, include the value of the secondary products made by the plants classified in the industry.

Because the Bureau of the Census is prohibited from disclosing the operations of any individual company, general plant and detailed commodity information for any industry can be published only where a given industry in a given State or area is represented by three or more independently owned establishments of approximately the same size. This restriction has little effect upon tables for the entire United States, but there are many instances where because of the concentration of production in a few establishments, it has been necessary to combine data for presentation, rather than showing detailed industry data for each city and State.

There are also other collections - Another, however, was made - especially after  
as the collection is the same as the first. The same is the case with the  
as the first is almost the same. The same is the case with the second  
as the first is the same. The same is the case with the third  
as the first is the same. The same is the case with the fourth.

and in general conditions and manufacturing conditions of manufacturing in  
production and distribution from time to time to the International and Exchange Commission.  
The "Joint Commission" for the International Trade Commission and general investigating  
agencies. Financial conditions for various manufacturing industries in the form of  
"charts" and other data and are distributed monthly to the International and Exchange Commission. These of the  
International and Exchange Commission are distributed and published for the general information of the  
public and the International and Exchange Commission. The International and Exchange Commission  
publishes annually reports which cover economic and manufacturing conditions of pro-  
duction, distribution and international trade in selected important industries. Each  
industry is dealt with under products which are subject to trade in the various countries  
and is comparative view. The International Trade Commission has made several com-  
parative studies of international industries, including among them are the reports on the  
textile, leather, rubber, cotton, sugar, petroleum, agricultural and mechanical, and  
the automobile, airplane, and machinery industry. Studies of individual industries  
are also made of the various countries and of the various countries.

It should be noted, however, in addition to the statistics presented in this section, the value of the output and activities of manufacturers will be found in various other sections of the Statistical Abstract. For example, data on wages and hours appear in section 12, Labor Time Employment, and Pay Rolls; statistics on manufacturing and production compiled from corporation income tax returns appear in section 14, Income of Corporation Taxpayers and statistics on lumber production in section 25, Lumber and Wood Products. For page references to the community or industry, consult the index. For references to the important sources of statistics on manufacturing and related activities see the listings under the appropriate subjects in the "Bibliography," A Review of Statistical Data," pages 572-583.

No. 915.—MANUFACTURES—SUMMARY: 1849 TO 1939

[It is sometimes necessary, for various reasons but chiefly because of changes in census classification, to make adjustments in figures for earlier census years. Adjustments have been made in figures beginning with 1899 as a result of exclusion from Census of Manufactures since 1929 of the industries "Coffee and spice, roasting and grinding," "Flax and hemp, dressed," "Gas, illuminating and heating," "Grindstones," "Motion pictures, not including projection in theaters," "Peanuts, walnuts, and other nuts, processed or shelled," and "Railroad repair shops" (both steam and electric)]

<sup>1</sup> Value of products less cost of materials, containers, fuel, and purchased electric energy.  
<sup>2</sup> For all establishments having products valued at \$500 or more.  
<sup>3</sup> Reduced to gold basis.  
<sup>4</sup> For all establishments having products valued at \$5,000 or more.  
<sup>5</sup> Includes cost of contract work.  
<sup>6</sup> Calculated by subtracting sum of cost of materials, containers, fuel, purchased electric energy, and cost of contract work from value of products. Not strictly comparable with years prior to 1935.  
<sup>7</sup> An establishment operating two or more factories was counted as two or more establishments in censuses for 1937 and 1939. Total number was increased approximately 2,000 by this change.

<sup>1</sup> Because of change from \$500 to \$5,000 in minimum-value-of-products limit, "Number of establishments reporting power equipment" figures for 1919 and earlier years are not comparable with those for 1929 and 1939. This change did not, however, materially impair comparableness of figures for other items in this table.

<sup>2</sup> Returns for "Logging camps and logging contractors (not operating mills)," numbering 967, were excluded from power tabulations.

<sup>3</sup> Includes 47,192 horsepower reported as other owned power, not distributed by type of prime mover.

<sup>4</sup> Includes 28,213 horsepower reported as other owned power, not distributed by type of prime mover.

<sup>5</sup> Figures for "Steam engines" include data for "Steam turbines," not reported separately.

<sup>6</sup> Figures for "Other internal-combustion engines" include data for "Diesel and semi-Diesel engines," not reported separately.

<sup>7</sup> Includes data for water motors.

**No. 928.—MANUFACTURES—SUMMARY FOR INDUSTRY GROUPS, 1929 TO 1939, AND FOR SUBGROUPS AND INDUSTRIES, 1939**

[Figures do not represent exactly numbers of wage earners, values of products, etc., assignable to classes of commodities from which industries derive their names, as it is necessary for census purposes to classify each establishment as a whole in some one industry, according to its product of chief value, although in many cases a single establishment manufactures two or more classes of commodities. See also general note, p. 811].

<sup>1</sup> Barrels of not more than 31 wine gallons.    <sup>2</sup> Excludes ethyl alcohol.  
<sup>3</sup> A tax gallon for spirits of 100 proof or over is equivalent to the proof gallon. For spirits of less than 100 proof the tax gallon is equivalent to the wine gallon.  
<sup>4</sup> Excludes high-proof spirits and unfinished spirits produced at registered distilleries for industrial purposes.  
<sup>5</sup> Includes ethyl alcohol.  
<sup>6</sup> Excludes vermouth.  
<sup>7</sup> Production represents total amount removed from fermenters, including distilling material (substandard wines produced with excessive water or residue materials). In 1946, 260,240,000 gallons of distilling materials were produced.  
<sup>8</sup> Standard United States gallon.  
<sup>9</sup> Excludes distilling materials.  
<sup>10</sup> Includes champagne, other sparkling wines, and artificially carbonated wines.  
<sup>11</sup> Tax is payable on each ½ pint or fraction thereof in each bottle or container.

No. 930.—TOBACCO, LEAF—AMOUNTS CONSUMED IN THE MANUFACTURE OF CIGARS, CIGARETTES, CHEWING AND SMOKING TOBACCO, AND SNUFF

[All figures in thousands of pounds. Figures represent the equivalent in unstemmed leaf tobacco of stemmed leaf or scraps, cuttings, and clippings. In the following table the tobacco used in the manufacture of cigars and cigarettes was converted on the basis of 3 pounds of stemmed leaf or scraps, etc., to 4 pounds of unstemmed beginning 1915 (conversion prior to 1915 was at the ratio of 3 to 5) and of tobacco and snuff beginning 1903. For 1896 to 1902, tobacco used in manufactured tobacco and snuff was shown only under two heads, namely, "leaf" and "scraps." It is probable that stemmed leaf was included with unstemmed tobacco under the head of "leaf" without the one kind being converted to the equivalent in the other. The conversion ratio of 3 to 4 was applied only to "scraps" for these years. Data exclude tobacco used in bonded manufacturing warehouses]

<sup>1</sup> Active cotton spindles represent sum of greatest number reported by each mill as active at any time during year regardless of length of time operated. Spindles consuming cotton mixed with other fibers represent total number reported as producing cotton blends at any time during year. Collection of these data were discontinued at close of reporting period, July 31, 1945. Beginning Aug. 1945, data on number of cotton spindles active last day of each month by type of fiber spun were collected. On July 31, 1946, there were 21,578,000 spindles active on cotton, 575,000 on synthetic fiber, 393,000 on blends with cotton, and 231,000 on other fibers and other blends. Of 21,578,000 spindles active on cotton, 16,869,000 were in "Cotton-growing States," 4,173,000 in "New England States," and 536,000 in "Other States."

<sup>2</sup> Includes linters for 1840 to 1908. Figures for all years include foreign and domestic cotton.

<sup>3</sup> Not available. <sup>4</sup> Cotton mills only.

<sup>5</sup> Includes stocks held in public storage and at compresses beginning 1938.

<sup>6</sup> Includes linters for 1906 to 1944. <sup>7</sup> Average, 1909 and 1910.

<sup>8</sup> "Upland" includes "American-Egyptian" beginning 1912 (first year produced). <sup>9</sup> Less than 500 bales.

<sup>2</sup> Data not available.

<sup>3</sup> 1943 and other years not strictly comparable. Census of Manufactures for 1899, 1914, and 1929 called for a report on looms from those mills whose principal products were wool and hair goods while 1943 inquiry covered all mills consuming weaving yarns spun on woolen or worsted spinning spindles. Includes pile fabric looms conforming with these definitions.

<sup>1</sup> Cotton fabric data for 1939 include cotton, linen and cotton-warp mixtures. Rayon fabric data include rayon and silk, including mixtures.

<sup>2</sup> Complete data for finishing rayon fabrics in 1941 are not available.

<sup>3</sup> Rayon fabrics are defined as fabrics containing 51 percent or more rayon by weight. Rayon means synthetic yarns made by viscose, cuprammonium and cellulose acetate processes. An unknown quantity of fabrics made from nylon and other synthetic fibers are also included in the rayon yardage.

<sup>4</sup> White finished rayon goods are included with rayon dyed goods.

<sup>5</sup> Includes roller, screen, flock and block printed fabrics.

# No. 941.—RAYON BROAD WOVEN FABRICS—PRODUCTION, BY TYPE: JULY 1943 TO DECEMBER 1946

[Data cover production of rayon broad woven fabrics containing by weight 51 percent or more rayon. Fabrics reported are either 100 percent rayon or rayon mixtures containing 51 percent or more rayon with addition of cotton or other fibers. However, if wool fibers are added to extent of 25 percent or more, they are classed as woolen mixtures and are not included with fabrics listed. After Census of Manufactures for 1939, detailed data for this industry were not collected until 1943. These data were collected to meet requirements of war agencies and are not comparable with Census of Manufactures data]

# No. 942.—WOOLEN AND WORSTED MANUFACTURES—PRODUCTION, BY KIND, 1939 TO 1946

[Woolen and worsted woven goods defined as fabrics containing by weight 25 percent or more wool fiber. Wool fiber means fibers as defined by Wool Products Labeling Act of 1939. Data beginning with 1942 not strictly comparable with those published in Census of Manufactures for 1939. Detailed information on military fabrics required by war agencies, and in most cases, collected by type of fabric rather than by end use. Consultations with military agencies provided basis for estimating end use of each type of fabric. Estimates occurred primarily in men's wear fabrics, and involved less than 15 percent of total apparel fabrics produced. Production figures of women's and children's wear fabrics collected by weight of fabric instead of end use. In Census of Manufactures for 1939 data collected from this industry on a square-yard basis, present series requires reporting of linear yards, with narrow fabrics converted to a 54-inch width. 1939 data converted to a 54-inch linear yard measure by dividing quantity of square yards by 1 $\frac{1}{4}$ , excepting blankets which were converted to a 72-inch linear yard measure by dividing quantities of square yards by 2]

1 Figures beginning with 1930 not strictly comparable with earlier years owing to fact that large quantities of heavy footwear now included with men's shoes were included with "Athletic" prior to 1927. Men's shoes include Government shoes beginning with 1941.

2 Not reported separately; included with "all other."

3 Not reported separately; included with various classes of boots and shoes.

4 Includes footwear with fabric uppers and rubber soles made on conventional shoe machinery.

5 Includes slippers and moccasins (all leather and part leather, felt, etc.) for house wear.

<sup>1</sup> The inclusion of "Books and pamphlets printed for publication by others," "Maps, atlases and globe covers made for others," "Greeting cards printed for others," "Newspapers and periodicals printed for publication by others," etc. results in duplication in the aggregate value and receipts, as follows: 1937, \$158,466,000; 1939, \$201,637,000. (No separate data available for greeting cards for 1937.) These amounts represent receipts by commercial printers for work done by them for other printers or for publishers, and consequently enter twice into the aggregate value and receipts.

<sup>2</sup> Includes "Pamphlets printed for publication by others."

<sup>3</sup> No data.

<sup>4</sup> Included with "Other commercial printing."

<sup>5</sup> Included with "Greeting cards."

<sup>6</sup> In addition, labels, tags, and seals were produced by methods other than letterpress, as follows: 1937, \$25,693,000; 1939, \$29,944,000. 1929 figures are not available.

<sup>2</sup> No comparable data.

<sup>3</sup> Excludes by-product coke-oven production.

<sup>4</sup> Not shown separately to avoid disclosure of individual operations.

<sup>5</sup> Proportion of estimate, 5 percent.

<sup>6</sup> Includes data for deodorizing, decolorizing, and water purification grades. Data for gas-mask solvent recovery grades excluded.

<sup>7</sup> Proportion of estimate, 3 percent or less.

<sup>8</sup> Includes data for molybdate chrome orange.

<sup>9</sup> About 1 percent of production represents data for pulp colors, and finished and reduced chrome yellow.

<sup>10</sup> Proportion of estimate, 4 percent.

<sup>11</sup> Includes quantities diverted to manufacture of caustic soda and sodium bicarbonate and quantities processed to finished light and finished dense soda ash.

<sup>12</sup> Excludes quantities converted to finished dense soda ash.

<sup>13</sup> Collected in cooperation with Bureau of Mines.

<sup>14</sup> Excludes quantities later evaporated to solid caustic and reported as such.

<sup>15</sup> Includes sulfuric acid of oleum grades.

## No. 970.—IRON AND STEEL—AGGREGATE EXPORTS: 1890 TO 1945

[Covers products listed in table 971; excludes data for highly elaborated products of iron and steel. Value figures through 1931 exclude, and those beginning 1932 include data for small items for which quantity figures are not available. Ferromanganese data included for all years. Data for steam and hot-water heating boilers and radiators, formerly classified as heavy iron and steel products, excluded beginning with 1932]

[Quantities in thousands of long tons (2,240 pounds); values in thousands of dollars]

No. 975.—NONFERROUS METALS AND ALLOYS, AND FINISHED PRODUCTS THEREOF—  
PRODUCTION, BY KIND: 1925, 1927, AND 1929

[Covers products made for sale and interplant transfer, excluding those made for consumption in same works. Data represent production of commodities specified, whether made as primary or as secondary products by industries reporting them. Census designations of industries in which these commodities are made are as follows: "Alloying; and rolling and drawing of nonferrous metals, except aluminum"; "Secondary smelting and refining of nonferrous metals, not elsewhere classified"; "Nonferrous metal foundries (except aluminum)"; and "Nonferrous metal products not elsewhere classified." No data are included for production of copper, lead, zinc, and other nonferrous metals from the ore nor of secondary metals by establishments engaged in primary smelting and refining of nonferrous metals]

## No. 977.—MACHINERY—VALUE OF THE PRINCIPAL CLASSES MANUFACTURED

In thousands of dollars. The various classes of machinery listed are products of a number of industries, such as "Industrial machinery, not elsewhere classified," "Motor vehicles, motor-vehicle bodies, parts and accessories," "Agricultural machinery (except tractors)," etc. This table is not an industry presentation, but a special presentation giving value of products for groups designated. The values are in part duplicated in other tables in this Abstract such as tables 978 and 983.

CLASS	1925	1926	1927	1928	1929

### No. 988.—AIR CONDITIONING AND COMMERCIAL REFRIGERATION EQUIPMENT— SHIPMENTS BY MANUFACTURERS: 1940 AND 1944

[Value figures in thousands of dollars. Statistics cover types normally sold as standard items and more important types of components and accessories. Data include a very limited amount of certain types specifically designed for special uses. Excluded are less important components and accessories such as switches, dehydrators, accumulators, valves, and surge drums and tanks. Companies included account for approximately 99 percent of the total value of equipment shipped during 1944]

## No. 984.—MOTION-PICTURE PRODUCTION—SUMMARY: 1921 to 1939

[All money figures are in thousands of dollars. Represents activities of motion-picture studios and laboratories. Excludes distribution of films and their projection in theaters. No data included for establishments which reported less than \$5,000 as cost of work done. The motion-picture industry has been canvassed, since 1921, in connection with the Biennial Census of Manufactures. It is not, however, a manufacturing industry, but was treated as such prior to 1931]

## No. 985.—ALASKA—MANUFACTURES, BY INDUSTRIES: 1899 TO 1939

[Figures for 1939 do not include data for plants reporting products valued at less than \$2,000; those for earlier years cover all plants having products valued at \$500 or more. This increase in minimum value-of-products limit resulted in some reduction in "Number of establishments" reported as compared with what it would have been had minimum of \$500 been retained, but did not seriously impair comparableness of figures for 1939 with those for earlier years. Comparable figures for earlier years are given for all industries for which such figures are available]

<sup>1</sup> Figures include patents for inventions, designs, and reissues of patents. Includes applications without fees.

<sup>2</sup> Data are for period from July 28, 1836, to Dec. 31, 1890, except as otherwise specified.

<sup>3</sup> Data are for 11 years beginning 1940; records prior to this date are not available.

<sup>4</sup> Data are for 8 years beginning 1943.

<sup>5</sup> Data are for the year 1870.

<sup>6</sup> Registration of labels suspended from May 27, 1891, to June 9, 1896.

<sup>7</sup> Data are for 8 years; first print registered Mar. 7, 1893.

<sup>8</sup> Figures for 1940 are for the six-months period ended June 30, 1940. On July 1, 1940, jurisdiction of prints and labels was transferred to the Copyright Office, Library of Congress, and data concerning them are compiled by that organization. (See table 901.)

## 30. Foreign Commerce of the United States

All foreign trade statistics in this section were compiled by the Department of Commerce, Bureau of the Census beginning May 1941. Prior to that time the statistics were compiled by the Bureau of Foreign and Domestic Commerce. Annual statistics on foreign trade appear in the report, *Foreign Commerce and Navigation of the United States*, and monthly data appear in the *Monthly Summary of Foreign Commerce of the United States*. Except as noted (as, for example, in table 1020) the values stated are in United States dollars without reference to changes in the gold content of the dollar. (The statutory price of gold—\$20.67 per ounce—in effect prior to Jan. 31, 1934, was changed on that date by Executive Order to \$35 per ounce. Between Mar. 10, 1933, and Jan. 31, 1934, the foreign exchange value of the dollar was permitted to depreciate as a result of the restriction placed on gold shipments to foreign countries.) The geographic area covered by these statistics, except as noted, is the United States customs area, which includes Alaska, Hawaii, and Puerto Rico, and from Jan. 1, 1935, through Dec. 31, 1939, the Virgin Islands (see headnote, table 1000). Other explanations of the trade tables are given in the introduction to the annual report, *Foreign Commerce and Navigation of the United States*.

<sup>1</sup> Unilateral transfers indicate amount of contributions in kind or in cash thru Lend-lease, U. N. R. R. A., personal and institutional remittances, and similar channels. Thus, payments or receipts under unilateral transfers in most cases offset exports or imports, respectively, of goods and services for which present or future compensation is not required.

# No. 994.—EXPORTABLE GOODS, PRODUCTION AND PROPORTION EXPORTED: 1909 TO 1946

[Agricultural production is gross income, excluding feed, seed, and waste. Manufactures represent value added by manufacture—census data through 1939 and approximations thereafter. Value of mine products in 1909, 1919, and 1929 are census figures, in 1929 census data plus petroleum products, and in other years, estimates based on data of Bureau of Mines. Freight receipts represent receipts of steam railroads through 1927, of steam railroads, motor carriers of property (estimate), and pipelines thereafter. As the figures are not adjusted for price changes, the increase or decrease in absolute values from period to period should be disregarded]

# No. 999.—EXPORTS AND IMPORTS OF MERCHANDISE, PER CAPITA: 1791 TO 1946

(Export figures for 1791 to 1830 are based on total exports including reexports (the latter were then relatively large) and for 1831 to date, on exports of United States merchandise only, shown in table 995. Import figures for 1791 to 1830 are based on general imports shown in table 995, for 1831 to 1870, total imports less reexports, and for 1871 to date, imports for consumption, shown in table 1023)

### No. 1000.—MERCHANDISE TRADE OF CONTINENTAL UNITED STATES WITH FOREIGN COUNTRIES AND OUTLYING TERRITORIES AND POSSESSIONS: 1903 TO 1945

**IMPORTANT NOTE.**—This table differs as to its geographic basis from all other foreign trade tables in this section and in other publications: (1) In the case of other tables the data represent the trade of the United States customs area with all foreign countries, including the Philippine Islands and prior to 1905, the Virgin Islands. The U. S. customs area comprises continental U. S., Alaska, Hawaii, Puerto Rico, and during 1923 through 1939, the Virgin Islands. Trade between continental U. S. and the territories mentioned as part of the customs area are therefore excluded from these data. (2) The present table takes continental United States as the basis. In the totals, trade between it and all United States Territories and possessions is included, while the trade between that part of the customs area outside of continental United States and foreign countries is excluded. Practically all other nations calculate their foreign trade in the manner followed in the present table; that is, totaling the trade of the home country with foreign countries and with all outlying areas. Prior to 1901 Alaska was our only outlying area. Therefore, our foreign trade statistics for 1900 and earlier years very nearly represent the trade of continental United States with foreign countries. Data are for years ended June 30 through 1918; thereafter, for years ended Dec. 31.

**No. 1007.—EXPORTS OF U. S. MERCHANDISE AND IMPORTS—INDEXES OF CHANGES IN QUANTITY, UNIT VALUE (PRICE), AND TOTAL VALUE: 1913 TO 1946**

[Quantity and unit value indexes have been constructed by so-called "ideal formula," essential feature of which is use of quantities of several articles as weighting factors of their unit values for each pair of years compared. About 265 commodities were included in direct calculations for both exports and imports. It was then assumed that prices of articles in each economic class not directly covered had moved in parallel with those of articles covered and their value, adjusted by computed price index, was included in aggregative totals from which quantity index for each class was calculated. Index of quantity and unit value of total exports and imports was based on aggregate of adjusted totals of classes. In constructing indexes, data for 1919 were linked directly to 1913, and each subsequent year was compared with that preceding. Resulting year-to-year percentages were made into a series by chain method]

## No. 1011.—IMPORTS—VALUE OF SELECTED COMMODITIES: 1821 TO 1945

[For basis of dollar values, see general note, p. 887. Figures represent "general imports" through 1933, "imports for consumption" thereafter, except as indicated. Figures cover fiscal years ended Sept. 30 through 1890, and June 30, 1890 through 1918; calendar years thereafter. In some cases blanks represent entire absence of trade; in other cases the item is not available separately.]

<sup>1</sup> As reported to Treasury Department by collectors of customs, subject in certain cases to subsequent refund as well as drawback. These figures are somewhat higher than duties as calculated on the basis of imports for consumption, as shown in table 1023.

<sup>2</sup> Less than \$500.

<sup>3</sup> Duties less cost of collection are turned into the Islands Treasury; excluded from totals.

<sup>4</sup> Excluded from totals; not part of U. S. Customs area, assessed under Tariff law of V. I.

<sup>5</sup> Formerly San Antonio, changed to Laredo, effective Dec. 22, 1939.

<sup>6</sup> Iowa included with Chicago, beginning Sept. 23, 1939.

<sup>7</sup> Omaha included with Chicago in 1945.

# No. 1020.—EXPORTS (INCLUDING REEXPORTS) AND IMPORTS OF MERCHANDISE, BY GROUPS OF CUSTOMS DISTRICTS: 1860 TO 1945

[In thousands of dollars. For basis of dollar values, except export figures for 1865 and 1870-78, see general note, p. 887. Export figures for those years represent mixed gold and currency values and hence do not agree with the specie values given for total exports in other tables. Figures cover fiscal years to and including 1915, calendar years beginning 1916. Import data are "general imports" through 1933; "imports for consumption" thereafter. Exports and imports of the interior districts, a small percentage of the total, are not included in this table]

# No. 1021.—EXPORTS (INCLUDING REEXPORTS) AND IMPORTS OF MERCHANDISE, BY PRINCIPAL CUSTOMS DISTRICTS: 1860 TO 1945

[In thousands of dollars. For basis of dollar values, except export figures for 1865 and 1870-78, see general note, p. 887. Export figures for those years represent mixed gold and currency values. Figures cover fiscal years to and including 1915; thereafter, calendar years. Import data are "general imports" through 1933; "imports for consumption" thereafter. Areas of districts were rearranged July 1, 1913. Prior to that date some of the districts were more restricted. However, in most cases this change only slightly affects the comparability of the figures. Prior to 1914 the statistics given in the table for Buffalo include the (former) districts of Buffalo Creek and Niagara; those for Michigan include the (former) districts of Superior, Huron, and Detroit; and those for Massachusetts and Maryland were the former districts of Boston and Baltimore, respectively]

## No. 1028.—IMPORTS ENTERED FOR CONSUMPTION AND DUTIES THEREON: 1821 TO 1944

[For basis of dollar values, see general note, p. 887. From 1821 to 1866, inclusive, figures of import values represent total imports less reexports, and for 1867 and later years imports entered for consumption. "Ratio of duties to total" is based upon values of imports shown in table. Figures cover fiscal years ended Sept. 30, 1821 to 1842, and June 30, 1843 to 1915; calendar years thereafter]

# No. 1024.—IMPORTS OF MERCHANDISE, FREE AND DUTIABLE, AND PERCENT FREE, BY ECONOMIC CLASSES: 1821 TO 1945

[In thousands of dollars. For basis of dollar values, see general note, p. 887. Figures cover fiscal years ended Sept. 30, 1821 to 1840, and June 30, 1860 to 1915; calendar years thereafter, except as noted. Data are "general imports" through 1933; "imports for consumption" beginning 1934. Percentage free in general imports is normally slightly lower than in imports for consumption because relatively more of dutiable general imports are reported as reexported than of free general imports. Moreover, in the period 1923-1933, there is an understatement of free goods in general imports because, for 1923 to 1933, carpet wool used for making carpets and, for 1922 to 1933, wheat imported for milling in bond for exports were reported as dutiable when entered, although no duty was ultimately paid on these products. For adjusted figures see table 497 of 1935 issue of Statistical Abstract]

## 31. Commerce of Territories and Possessions

All statistics in this section, except as noted, were compiled by the Department of Commerce, Bureau of the Census beginning May 1941. Prior to that time, the data were compiled by the Bureau of Foreign and Domestic Commerce. These statistics are published in the Monthly Summary of Foreign Commerce of the United States. In the general foreign trade statistics in the preceding section, the Virgin Islands is treated as a foreign country prior to 1935 and its trade with the United States is included while its trade with other countries is not included. On the other hand, Alaska, Hawaii, and Puerto Rico, and for 1935-39, the Virgin Islands, are treated as integral parts of the United States, so that trade between them and continental United States is not included, while trade between them and foreign countries is included. Each of these territories appears as a separate customs district, but beginning with 1940, trade of the Virgin Islands has been excluded from the merchandise export and import figures. Neither trade of American Samoa and Guam with foreign countries nor shipments between them and the United States are included in the general tables on foreign trade. See also table 1000, p. 894.

The tables in this section present the total foreign trade of each of the U. S. Territories and possessions and show separately the trade with continental United States (unless otherwise indicated) and with foreign countries, including other U. S. Territories and possessions. For basis of dollar values, see general note, p. 887.

## **32. Distribution and Services**

### **CENSUS OF BUSINESS**

The primary source of data on distribution and services is the Census of Business. The first Census of Business covered the calendar year 1929. Although the next was scheduled by law to cover the year 1939, two special censuses covering the years 1933 and 1935 were taken before the regular 1939 census conducted as part of the 16th Census of the United States.

The business establishments covered in the distribution and service fields included in the Census of Business may be generally described as follows:

**Retail trade.**—Places of business primarily engaged in selling merchandise in a retail manner to personal and household consumers;

**Wholesale trade.**—Establishments primarily engaged in selling goods to dealers and distributors for resale or to purchasers who buy for business uses; and,

**Service.**—Establishments engaged primarily in selling services as contrasted with merchandise as in the case of retail and wholesale trade.

In order that the coverage of distribution operations be complete, the censuses taken in 1929, 1935, and 1939 included information on the distribution of manufacturers' sales showing the proportion of manufacturers' output flowing through various distribution channels.

The most important differences in scope among the four Censuses of Business are to be found in the coverage of service enterprises. Service establishments were not included in the 1929 Census of Business at all. In 1933 the Census of Business was expanded to include certain service enterprises. These can be broadly classified into the following five major groups: (1) personal services, such as barber shops, laundries, etc., (2) selected business services, (3) repair services, (4) places of amusement, and (5) hotels. The 1935 Business Census added a number of important services among which were banking and finance, motor transportation, real estate agencies, warehousing, insurance, and radio broadcasting. In 1939, banking and finance, motor transportation, insurance, and radio broadcasting were again dropped along with a number of minor types of service business.

In addition to observing the changes in the coverage of service establishments from census to census, it is important to take cognizance of the kind of services, broadly defined, not included in any Census of Business. Outstanding in this group are the business activities of doctors, lawyers, dentists, and others performing a professional or scientific service, educational institutions, religious or charitable institutions, hospitals and infirmaries, public utilities, and government operated enterprises. In the past, these types of economic activity have been omitted largely because of problems in obtaining information or because reasonably adequate data were already available from other sources.

In many of the following tables data from the various Censuses of Business are compared. Adjustments have been made in the figures to make allowances for the changes in scope among the various years compared.

## CURRENT STATISTICS

**Wholesale trade.**—Monthly statistics on wholesalers' sales, inventories, and credits are compiled and published by the Bureau of the Census. These data are compiled on a sampling basis, covering 2,500 to 3,000 firms. Using these survey data as a basis, monthly estimates of aggregate sales of wholesalers raised to national totals are prepared by the Bureau of Foreign and Domestic Commerce and published in the Survey of Current Business.

Financial statistics relating to corporations in wholesale trade are available from the annual reports, Statistics of Income, published by the Bureau of Internal Revenue.

Current data on the production, movement, stocks, carry-over, receipts, and disappearances at principal markets, etc., for major agricultural commodities are available from the Production and Marketing Administration, Department of Agriculture.

As part of its investigations, the Federal Trade Commission has collected operating statistics on wholesalers as well as on the wholesale business of chains in various lines. Financial statistics on corporations engaged in wholesale trade whose securities are listed on the national security exchanges are available from the Securities and Exchange Commission.

**Retail trade.**—The Bureau of the Census compiles and publishes monthly statistics on sales of independent retail stores in 34 States, based on a sample of about 19,000 stores. The Bureau of Foreign and Domestic Commerce makes monthly estimates of the total sales of retail stores by kind of business groups and in addition makes monthly estimates of chain and mail-order sales. These estimates and related data on retail store sales are published currently in the Survey of Current Business.

Indexes of department store sales and stocks are compiled by the Board of Governors of the Federal Reserve System and by each of the 12 Federal Reserve Banks for its district. These indexes are published monthly in the Federal Reserve Bulletin and also in the Survey of Current Business. Monthly and annual statistics on consumer credit are compiled by the Board of Governors of the Federal Reserve System and published currently in the Federal Reserve Bulletin. Financial data for corporations engaged in retail trade and filing income tax returns are published by the Bureau of Internal Revenue in its annual report, Statistics of Income. Financial statistics on corporations engaged in retail trade whose securities are listed on the national securities exchanges are available from the Securities and Exchange Commission.

**Service trades.**—Typical of the numerous current statistical reports on personal and business services compiled by private agencies are the Horwath Hotel Accountant, Printers Ink, and National Advertising Records. Financial statistics of service businesses derived from corporation income tax returns are compiled and published annually by the Bureau of Internal Revenue in its annual report, Statistics of Income. Current data on service trades are provided by the Bureau of Foreign and Domestic Commerce in its quarterly and annual estimates of consumption expenditures published in the Survey of Current Business.

For additional or related data on distribution and service trades other than those included in this section, consult the index.

Data in this section relate to continental United States.

[No data are included for following classes of industries: (1) Those in which no sales were made, plants being maintained for purpose of making repairs; (2) those in which plants were engaged primarily in performing labor on materials owned by others so that their sales represented sales of services rather than commodities. This table is limited to industries for which 1929, 1935, and 1939 figures are directly comparable, whereas table 1086 covers all industries for which 1939 figures are available. For comparative purposes, data covering direct export are excluded]

<sup>1</sup> Includes sales of certain milk dealers in the amount of \$130,000,000, not included in tables 1043, 1044, as data for these concerns were received too late for inclusion in summary tables for 1929.

<sup>2</sup> Much of increase in sales of filling stations from 1929 to 1939 results from change in classification. (primarily selling gasoline and oil were classified separately as garages in 1929 Census of Retail Trade and in filling station category in 1939 Census of Retail Trade.)

<sup>1</sup> Previously published totals for 1929 and 1935 revised to exclude data for service garages and other automotive service businesses whose receipts from service sales exceed their sales of merchandise. These are included in the Census of Service Establishments for 1939.

<sup>2</sup> Includes general merchandise mail-order houses.

<sup>3</sup> Bicycle shops, included in this classification for 1929, are included in "Other retail stores" for 1935 and 1939.

<sup>1</sup> Figures for 1935 revised to exclude service garages; data to adjust 1929 figures not available.

<sup>2</sup> Represents, in addition to chain data shown in tables 1047 and 1048, data for multiunit organizations with 4 or more retail units, such as public utility stores, State liquor stores, direct selling (house-to-house), and other lesser types.

<sup>3</sup> Not strictly comparable with previous years, a schedule form provided for reporting warehouse operations for 1939 resulted in the receipt of a greater number of separate reports.

<sup>4</sup> Data not available.

<sup>5</sup> Includes estimates for a small number of warehouses for which billings were not reported.

### No. 1051.—SALES OF NEW PASSENGER AUTOMOBILES—INDEXES OF DOLLAR SALES ADJUSTED FOR SEASONAL VARIATIONS: 1929 TO 1941

[Represents consumer outlay on new passenger automobiles relative to base period 1935-36. Based on actual number of new cars sold by dealers each month, converted to a dollar basis by application of an estimated average price per car. Number of cars sold was reported each month to Automobile Manufacturers' Association and represented 96 percent of all dealers' sales. Series discontinued for the duration of the war will be resumed when additional data become available]

<sup>1</sup> Employees and pay roll include paid executives of corporations but not number and compensation of proprietors of unincorporated businesses.

<sup>2</sup> Statistics for 1935, adjusted for comparison, are as follows: Number of establishments, 631,300; receipts \$3,000,699,000. The adjustment was made by revising the original 1935 figures to include certain kinds of businesses that were not included in the Service Census but were published in other census reports and by excluding others which were within the scope of the 1935 census but were omitted from the 1939 census. For a comparison of the two items by industries, see source.

<sup>3</sup> For figures for earlier years, see table 1055, p. 966.

<sup>4</sup> Includes manufacturing plants with products valued at less than \$5,000 and therefore not covered by the Census of Manufactures.

## No. 1054.—SERVICE ESTABLISHMENTS—SUMMARY, BY STATES: 1939

[The census of service establishments covers a heterogeneous group of establishments (see table 1053) engaged primarily in the sale of service, as distinguished from establishments dealing in merchandise. The professional field, the financial, educational, transportation, construction, and diverse other fields of business activity, many of which are covered elsewhere, are not included. Owing to differences in the scope of the 1935 and 1939 censuses of service establishments, the aggregates for 1939 are not comparable with those for 1935 as published in the 1937-40 issues of the Abstract]

No. 1055.—POWER LAUNDRIES, CLEANING AND DYEING ESTABLISHMENTS, AND RUG CLEANING ESTABLISHMENTS—SUMMARY: 1919 TO 1939

[All money figures in thousands of dollars. Statistics cover establishments reporting receipts of \$5,000 or more except for 1939 figures in italics, which represent establishments reporting receipts of \$100 or more. The Census of Business for 1939 classified the establishments shown in this table as service establishments and covered those reporting receipts of \$100 or more. See also table 1053 for statistics for 1939. Statistics for 1935 and earlier years were compiled in connection with the Census of Manufactures. Rug cleaning was treated, in general, as an activity of the power laundry industry for 1929 and earlier years]

No. 1056.—HOTELS—SUMMARY, 1929 TO 1939, AND BY SIZE, 1939

[The census coverage of hotels is restricted, in the main, to establishments which are designated as hotels and which provide hotel accommodations as their major business activity. For 1935 and 1939, the canvass was limited to hotels having at least 6 guest rooms or having receipts from room rentals amounting to at least \$500 for a full year's operations. Because of differences in coverage for 1929, 1933, 1935, and 1939, comparable data are available only for year-round hotels having 25 or more guest rooms]

APPROXIMATE WEIGHT OF PETROLEUM AND PRODUCTS

In the United States petroleum and its products are measured by bulk, not weight. Whether handled in containers or without them the quantities are customarily reduced to the equivalent of barrels of 42 United States gallons (barrel thus equals 158.984 liters). In many foreign countries these commodities are measured by weight. The specific gravity of the different grades of crude petroleum and of the finished products varies materially. On the basis of approximate averages the Department of Commerce in converting foreign weight statistics to gallons or barrels of 42 gallons uses the factors shown in the following table:

	WEIGHT OF UNITED STATES GALLON		WEIGHT OF BARREL OF 42 GALLONS	
	Pounds	Kilo-grams	Pounds	Kilo-grams
Crude petroleum	7.3	3,311	306.6	139.07

## BIBLIOGRAPHY OF SOURCES OF STATISTICAL DATA

This bibliography contains under the various subject headings references to the important primary sources of statistical information for the United States. Secondary sources have been referred to if the information contained therein is presented in a particularly convenient form or if primary sources are not readily available. One-time studies presenting compilations or estimates for several years or new types of data not available in regular series are included.

Much valuable information will also be found in State reports and in reports for particular commodities, industries, or similar segments of our economic and social structure. However, because of the large number of such references, they are not included here.

Section references on the right hand side of each page indicate that data from the report cited appear in the Statistical Abstract. Where current reports and a summary volume are both cited in the bibliography the section reference will often appear opposite the summary volume only. Reference to the sections indicated will enable the user to ascertain the type of information presented in the original source. However, it should not be assumed that all of the subjects from that source are summarized in the Abstract.

The location of the publisher of the report is given except for Federal governmental agencies located in Washington. Major inquiries, such as the Census of Population, are referred to by name rather than by specific volume references under the various topic headings. The final reports of the Sixteenth Census, which include those on the Censuses of Agriculture, Business, Manufactures, Mineral Industries, Population, and Housing, are listed at the end of the bibliography.
